Introduction

JSN ImageShow gallery presentation

JSN ImageShow is the gallery extension built for Joomla! Content Management System for developers, photographers and publishers. You can choose to show images from multiple sources such as local image folder, Joomla! galleries: (JoomGallery, Phoca Gallery...) and online galleries (Flickr, Picasa, Facebook...). Configured gallery then can be published in any part of website including: article's content, mainbody area and module positions.

You can print this document for convenient reading.

Let's roll!

Use images from multiple sources

Present images from multiple sources

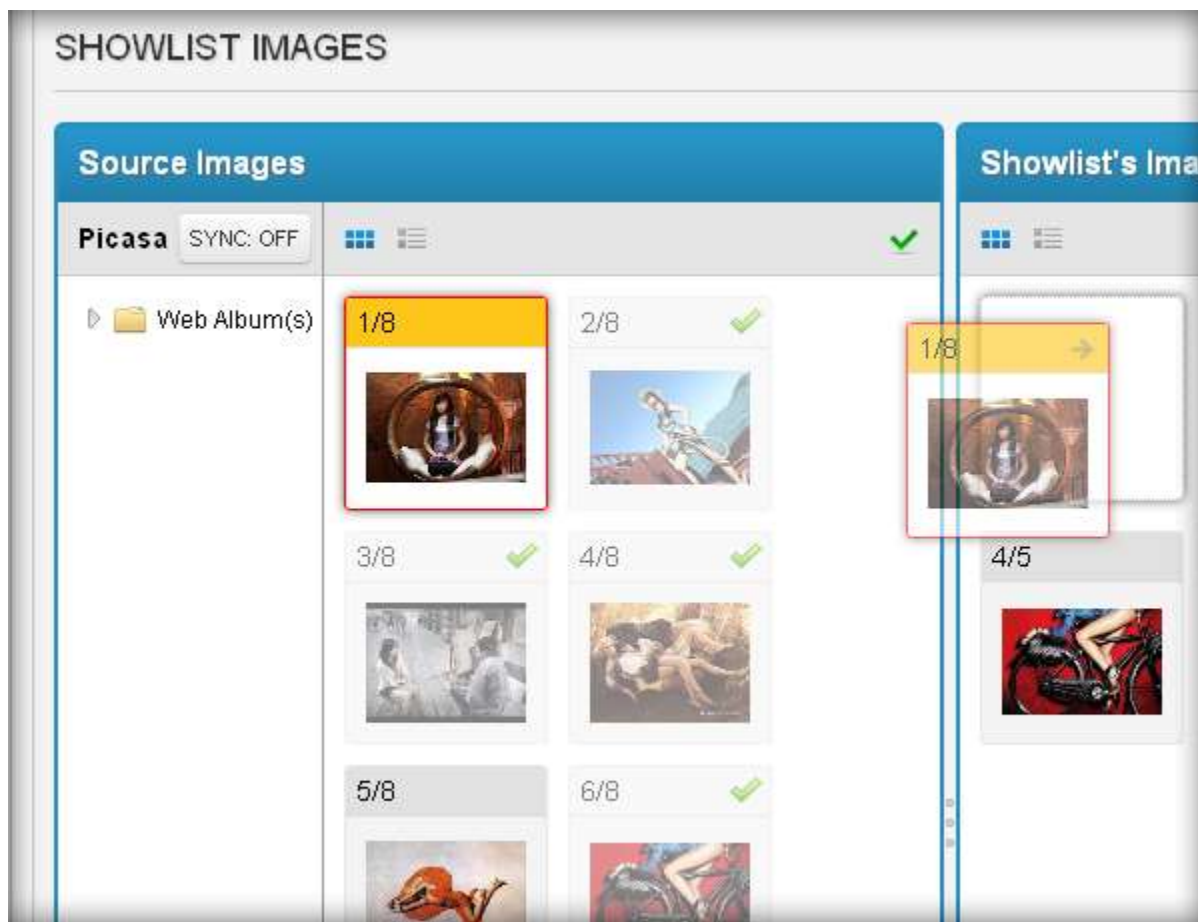

You can choose to show images from multiple sources:

- **Local image folder**
- **Joomla! galleries** - JoomGallery, RSGallery2 and Phoca Gallery.
- **Gallery services** – Flickr and Picasa, Image Shack
- **Social profile** - Facebook, Instagram

Read More: Section [Gallery images management](#).

Manage images with super easy interactive user interface

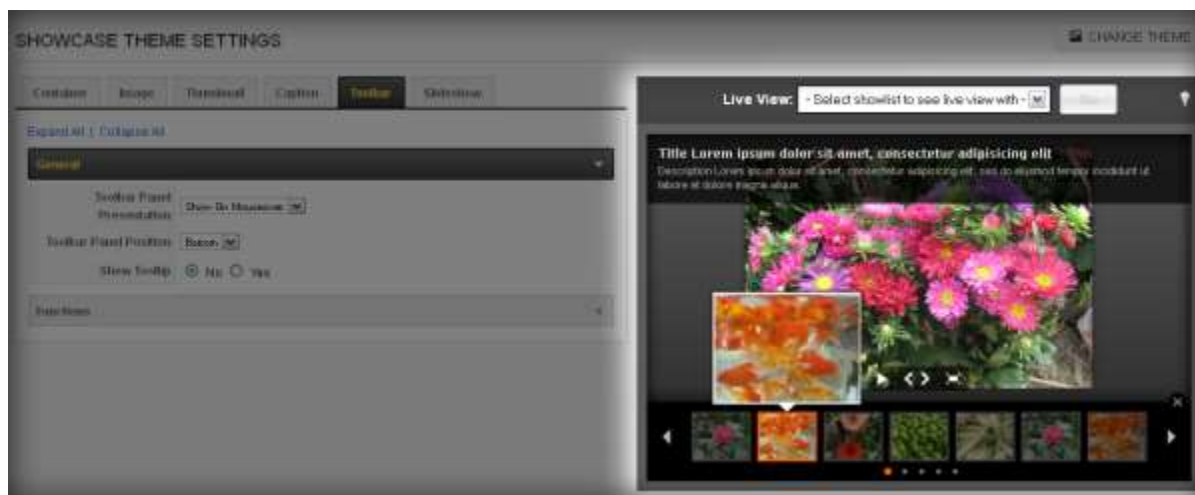

Super easy interactive user interface

Image management has never been easier with this drag & drop mechanism. You can choose desired images from the album then drag them into the showlist. JSN ImageShow will utilize all images directly from source, so you don't have to worry about managing them again.

Get free ebook to learn how to build a Joomla website with easy steps - <http://ow.ly/fh6dL>

Enjoy gallery presentation setup with Visual Preview and Live View

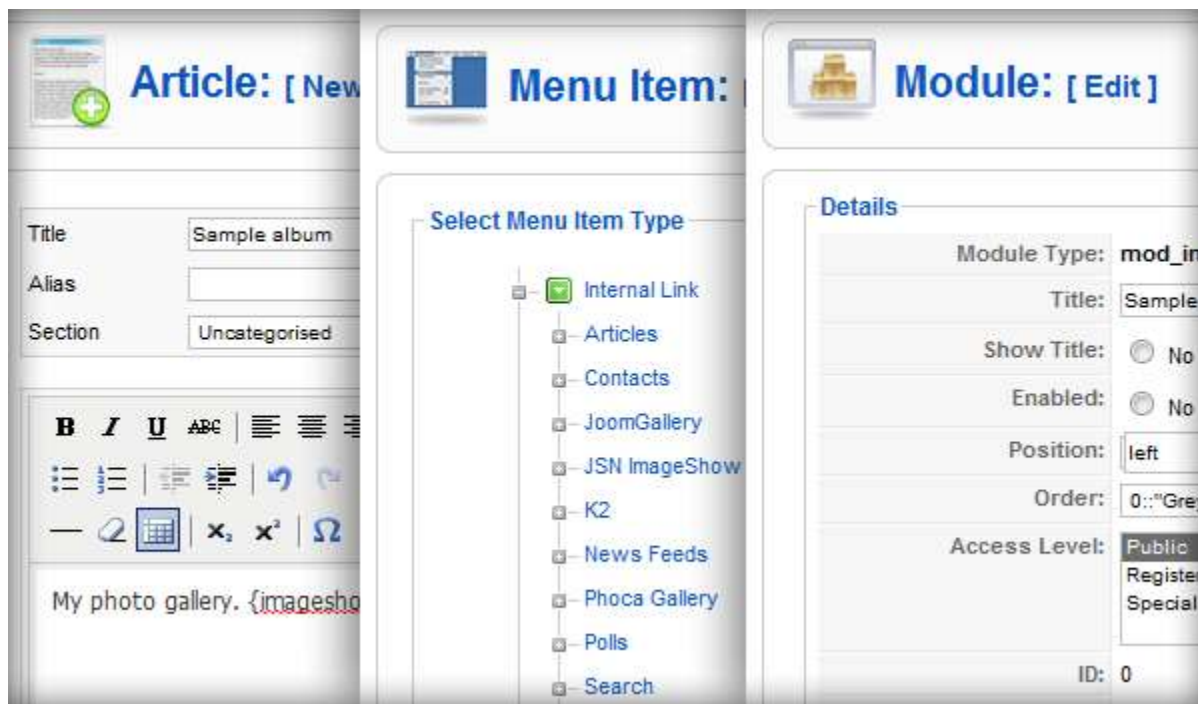

Visual preview with real-time parameter configuration

Click any part of **Visual Preview** and appropriate configuration parameters will be automatically opened on left side. When tweaking gallery parameters, you can see in real time how they are applied in Visual Preview.

Additionally, you can gallery in live action by using feature **Live View**. The live working gallery will be shown in neat modal window, so you don't have to switch to website front-end to see it.

Show images anywhere

Present gallery via menu item, inside article or in module position

You can present JSN ImageShow gallery many ways:

- **Component**
By using Component you can present gallery in main body area accessible via menu item.
- **Module**
By using Module you can present gallery in any module position supported by your template.
- **Content Plugin**
By using Content Plugin you can present gallery in any article.

When you install JSN ImageShow, all necessary elements will be installed automatically.

Get free ebook to learn how to build a Joomla website with easy steps - <http://ow.ly/fh6dL>

Quick access menu

Universal access menu

For quick and intuitive navigation JSN ImageShow has a multipurpose menu system on every page of the component. You can easily access the list of showlist, create a new showcase, and do other operations through the convenient drop-down menu.

Installation, Uninstallation and Updating

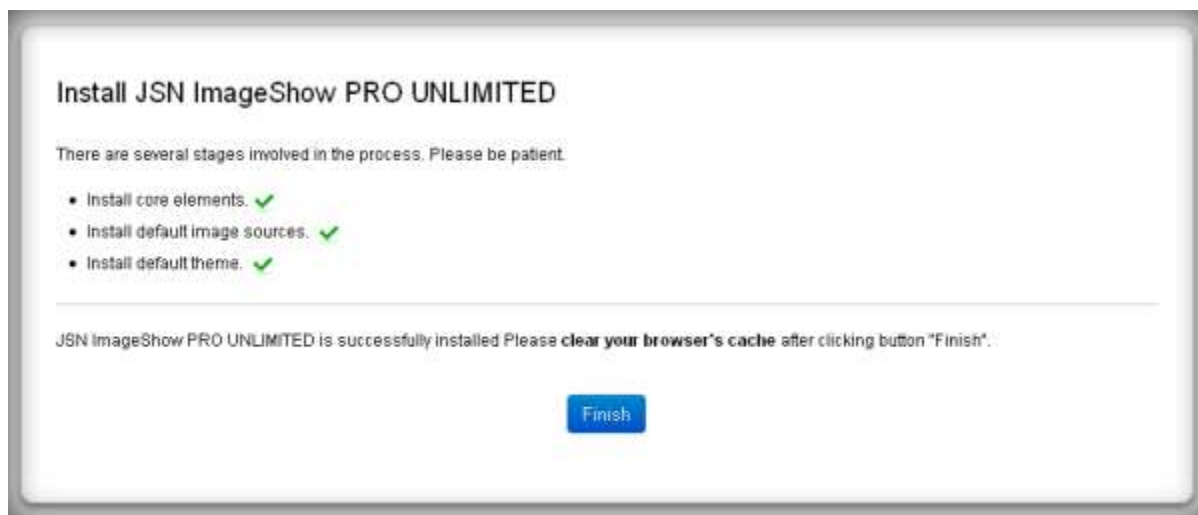

Product installation

After downloading, you should have an extension installation file called **jsn_imageshow_XXX_jY.Y_Z.Z.Z.zip**, where:

- **XXX** is the extension edition. It can be **free** or **pro**.
- **Y.Y** is the Joomla! version supported by the extension. It can be **2.5** or **3.0**.
- **Z.Z.Z** is the extension version.

This is a standard Joomla! extension installation file which can be installed in Joomla! administration as usual. Here is quick instruction to remind you:

1. In Joomla! administration, go to menu **Extensions** -> **Extension Manager**
2. Once you are on **Extension Manager**, click **Browse** button and select extension installation file **jsn_imageshow_XXX_jY.Y_4.Z.Z.zip**. After that, click on button **Upload & Install**.
3. Installation file will be uploaded to your server and installed in Joomla! automatically.
4. After core elements, default theme and image sources have been installed successful, clear your browser's cache and start using JSN ImageShow in your site.

Get free ebook to learn how to build a Joomla website with easy steps - <http://ow.ly/fh6dL>

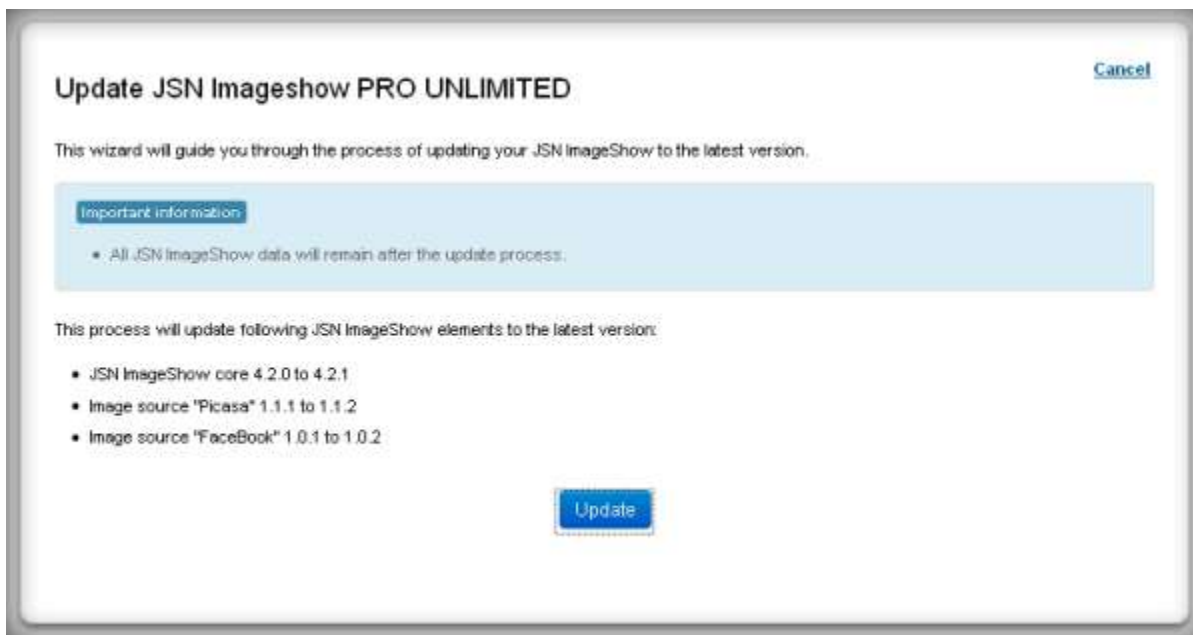

Updating via updater

Begin from **3.1.x**, you can update to the latest version directly in **JSN Imageshow** screen whenever there's any available updates.

In the next screen, you can download latest installation package of **JSN ImageShow version**, **JSN ImageShow plugin theme** and install it.

To update, you have to provide your **JoomlaShine** customer account to download latest installation package.

Product uninstallation

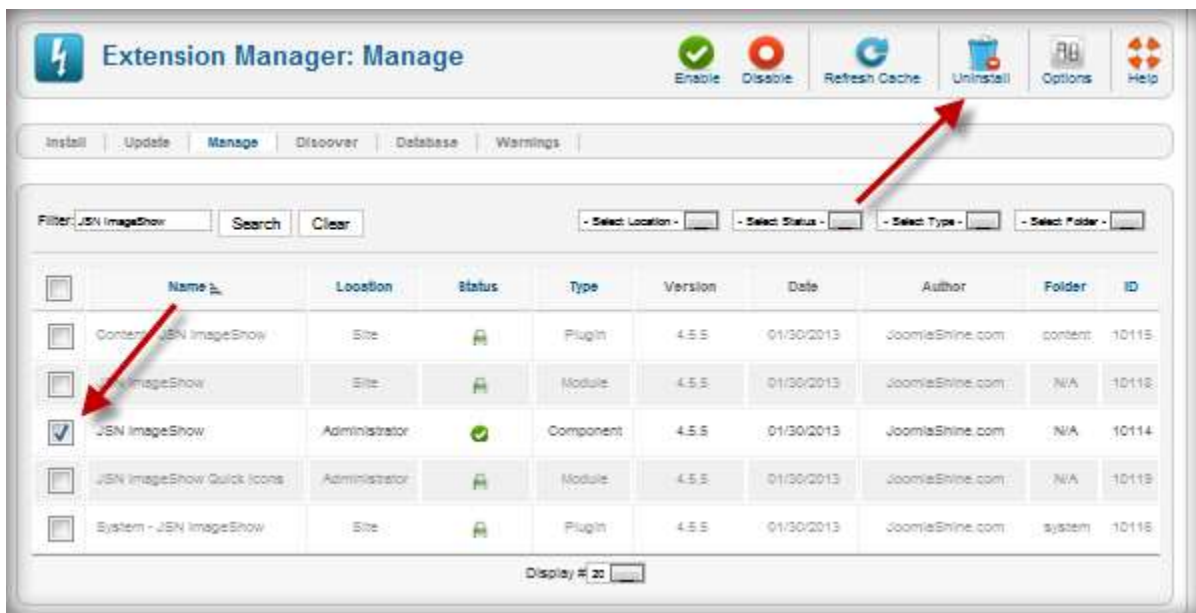

There're two ways to uninstall JSN ImageShow listed below:

1. Uninstall normally in Joomla back-end.
2. Uninstall quickly via JSN PowerAdmin.

Uninstall JSN ImageShow normally in Joomla back-end

This is the default uninstallation process of Joomla. You follow these simple steps to uninstall **JSN ImageShow** as well as other extensions installed on your site.

1. In Joomla! administration, go to menu **Extensions** -> **Extension Manager** -> Tab **Manage**.
2. Search for JSN ImageShow in the list. For a quick search you can type JSN ImageShow in the **Filter** box and click **Search** button.
3. Check JSN ImageShow and click **Uninstall** button at the right top corner to uninstall JSN ImageShow.

Uninstall JSN ImageShow in the default way

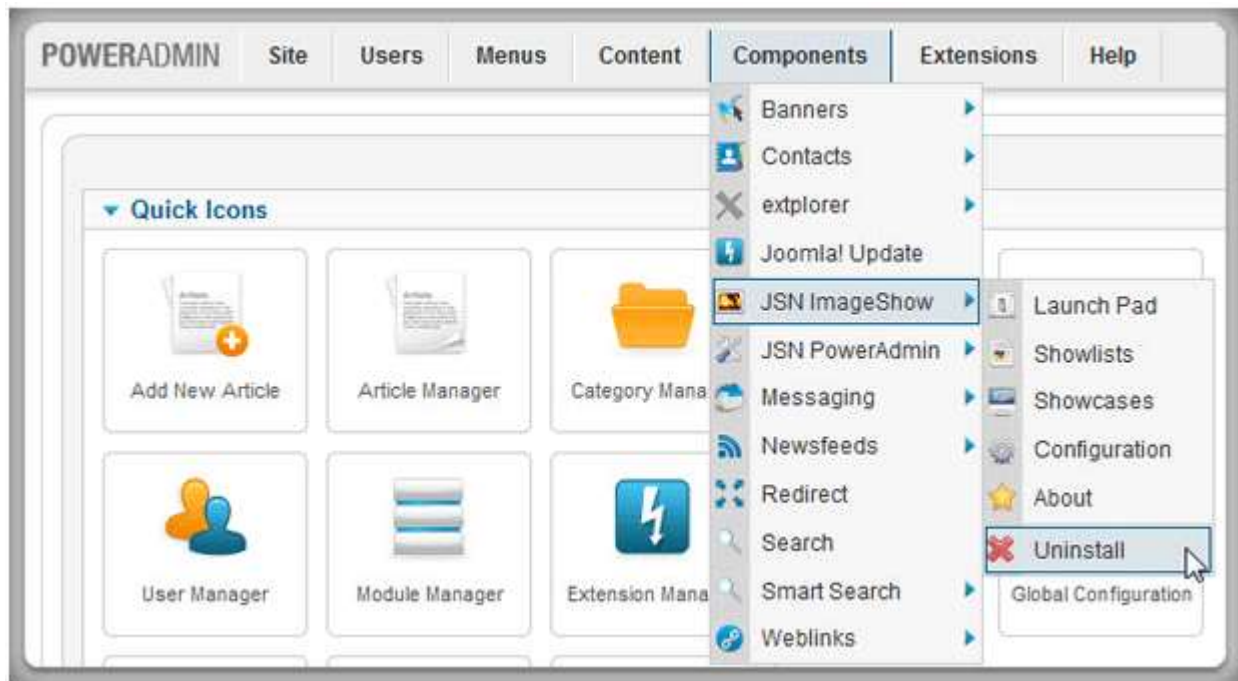

Get free ebook to learn how to build a Joomla website with easy steps - <http://ow.ly/fh6dL>

Uninstall JSN ImageShow quickly via JSN PowerAdmin

JSN PowerAdmin is a free admin navigation extension which helps you use Joomla with ease. It allows you to uninstall Joomla extensions much faster than the default Joomla uninstallation process.

You can [download JSN PowerAdmin free](#) and install it via back-end normally. After installing, JSN PowerAdmin toolbar appears on the top right, and the quick uninstall function is integrated to JSN ImageShow as well as other extensions.

You only need to click on **Component** -> **JSN ImageShow** -> **Uninstall**.

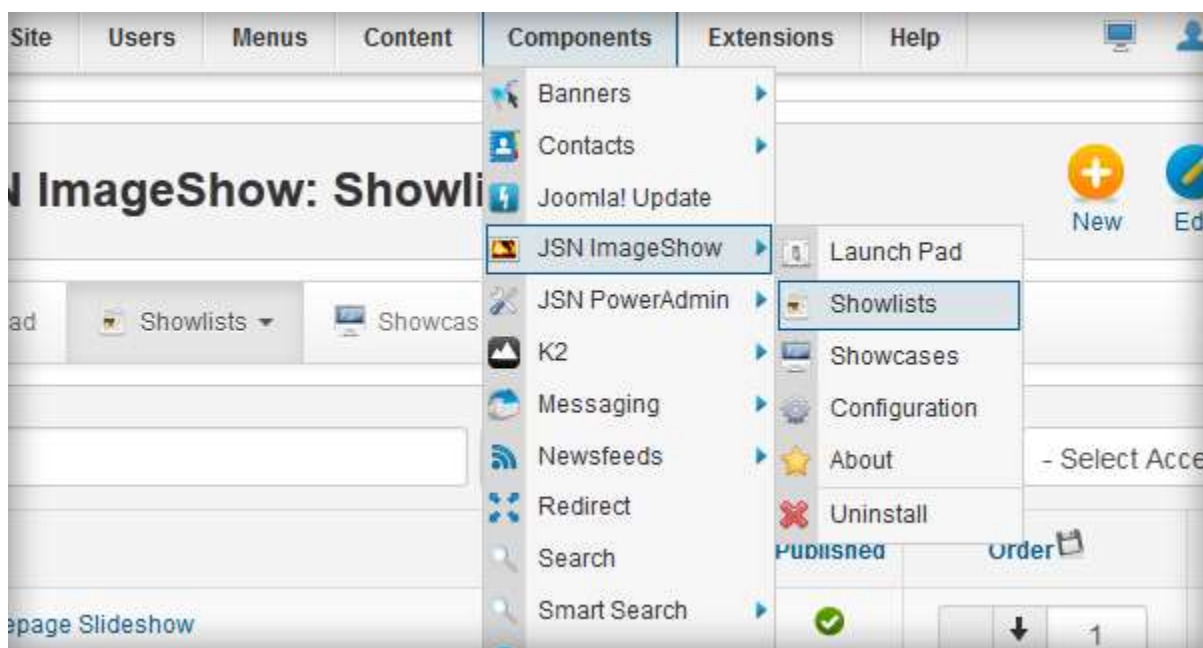

Uninstall JSN ImageShow with JSN PowerAdmin

Gallery images management

About concept “Showlist”

Showlist stores information about images to be presented in gallery. JSN ImageShow is able to connect to multiple image sources and use images directly from there. Image details like **title** and **description** are also used from the original source, so you don't need to bother reconfiguring them again. You can create multiple showlists connected to multiple image sources.

Creating new showlist

Access to Showlists Manager page

It's very easy to create new showlist.

1. From Joomla! administration choose menu **JSN ImageShow** -> **Showlists**
2. In **Showlists Manager** page, click button **New** on the toolbar.

Now you just need to configure showlist details and images as described in following sections of this document.

Setting up showlist details

Showlist details configuration

All showlist details are configured in four groups of parameters: **General**, **Images Details override**, **Access Permission** and **Misc**. Let's look at the parameters in detail.

General

- **ID** - Defines showlist's order
- **Title** – Defines showlist title to identify itself internally in the product. Additionally, you can configure parameter **Override Title** to apply this showlist title to all image titles in the gallery.
- **Published** – Defines whether to publish showlist or not. When the showlist is unpublished it can not be selected to present in image presentation.
- **Order** – Defines showlist position amongst others.
- **Hits** – Presents the number of showlist hits. Every time when you see a showlist on image presentation that's a hit. You can override the hits number with any value you want.

Get free ebook to learn how to build a Joomla website with easy steps - <http://ow.ly/fh6dL>

- **Description** – Defines showlist description. Additionally, you can configure parameter **Override Description** – Applies this showlist description to all image description in the gallery. Notice that the description will be presented in the form of plain text without HTML markup.
- **Link** – Defines showlist link. Additionally, you can configure parameter **Override Link** to apply this showlist link to all image links in the gallery.

Images Details Override

- **Override Title** – Defines how to use the showlist title for all images instead of an individual image title or not.
- **Override Description** – Defines how to use showlist description for all images instead of an individual image title.
- **Override Link** – Defines how to use the showlist link for all images instead of an individual image link.

Access Permission

- **Access Level** – Defines the group that can see the gallery with this showlist.
 - **Public** – All visitors can see the showlist.
 - **Registered** – Only registered visitors can see the showlist.
 - **Special** – Special group can see the showlist.
 - **Customer Access Level (Example)** – Customer Groups can see the showlist.
- **Authorization Message** - Defines the message that will be shown to viewers who don't have required access level.
 - **No Message** – No message will be displayed.
 - **Joomla Article** – Display any Joomla! article of your choice.

Misc

- **Images Loading Order** – Defines the order in which the images will be presented.
 - **Forward** – Present the images from the beginning to the end.
 - **Backward** – Present the images from the end back to the beginning.
 - **Random** – Present the images randomly.
- **Show EXIF Data** – Select to append [Exchangeable image file format](#) (EXIF) data in image details.
 - **No** – EXIF Data won't be appended to the image.
 - **Yes, append to image title** – EXIF Data will be appended to the image title.

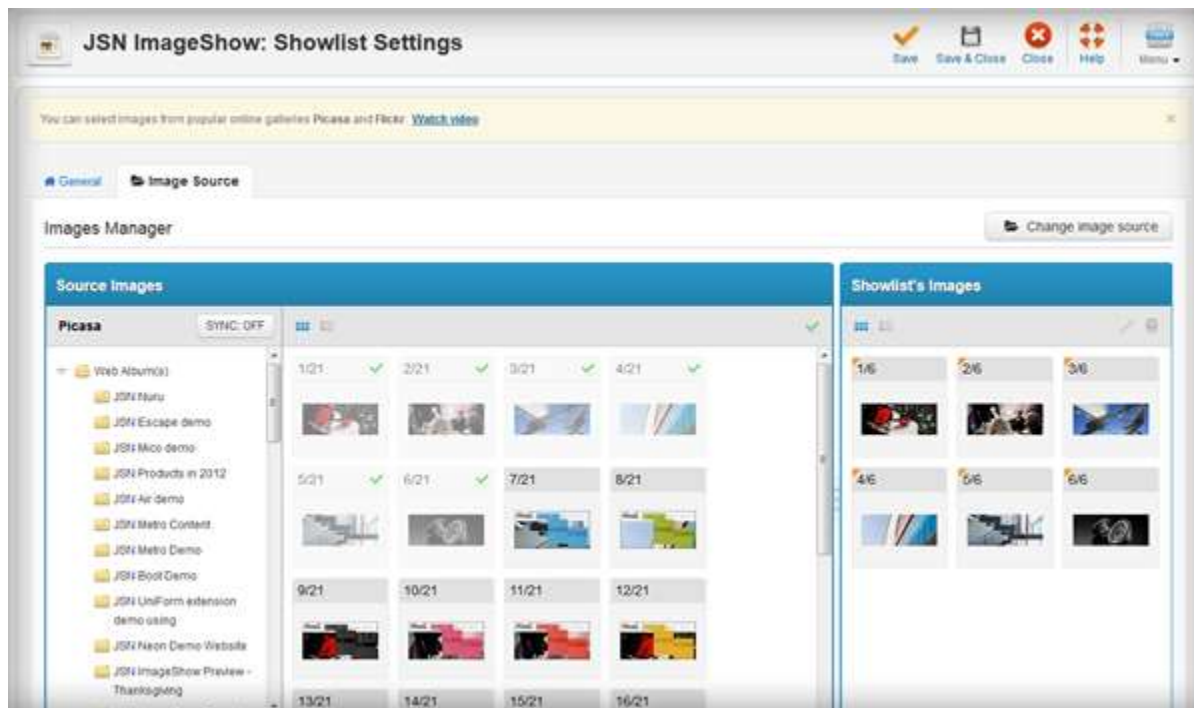

Get free ebook to learn how to build a Joomla website with easy steps - <http://ow.ly/fh6dL>

- **Yes, append to image description** – EXIF Data will be appended to the image description.

Setting up showlist images

Interface overview

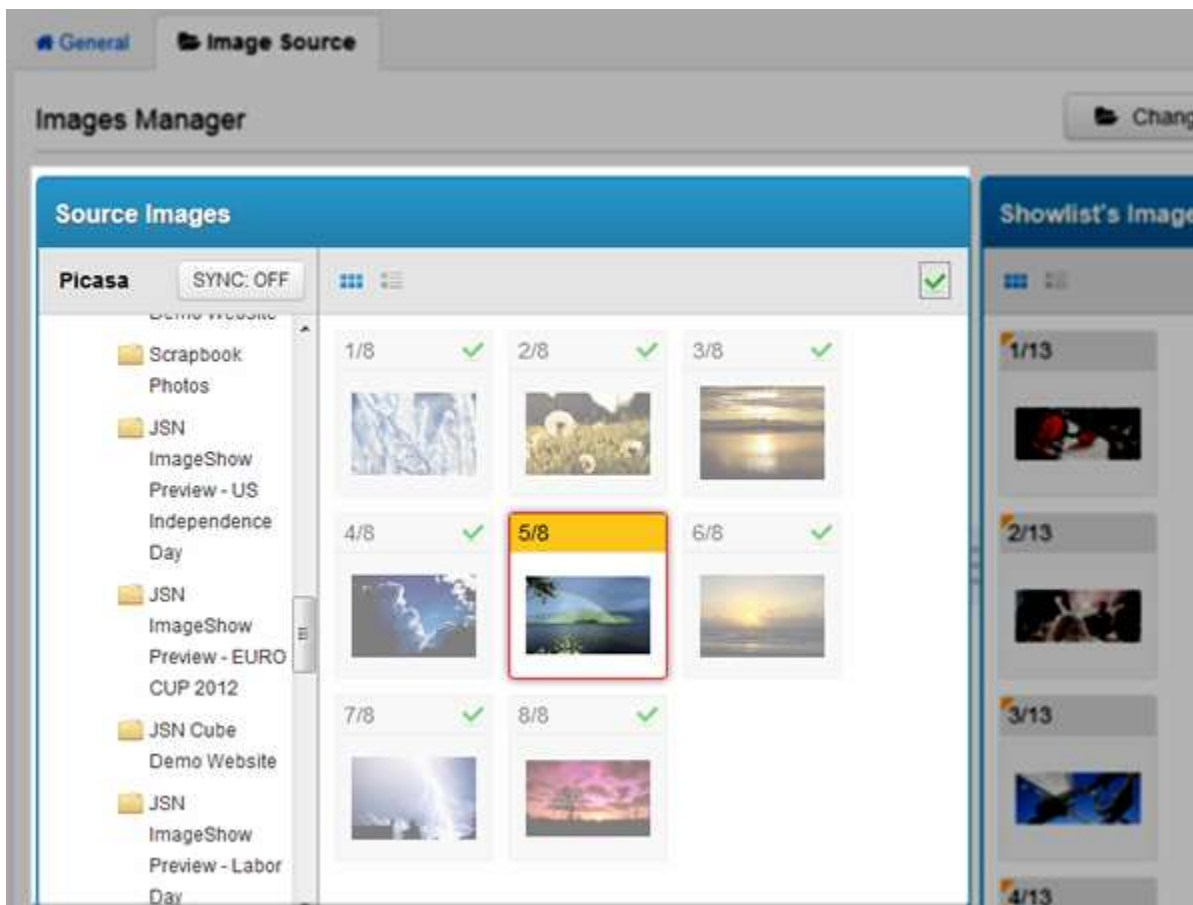

Working with images in the Showlist Images panel

All showlist image management operations are shown in panel **Showlist Images**, which consists of 2 areas **Source Images** and **Showlist's Images**.

Panel “Source Images”

In panel **Source Images** you can browse images from the image source to choose which images to add to showlist. The images can be moved to the **Showlist's Images** simply by the drag & drop operation.

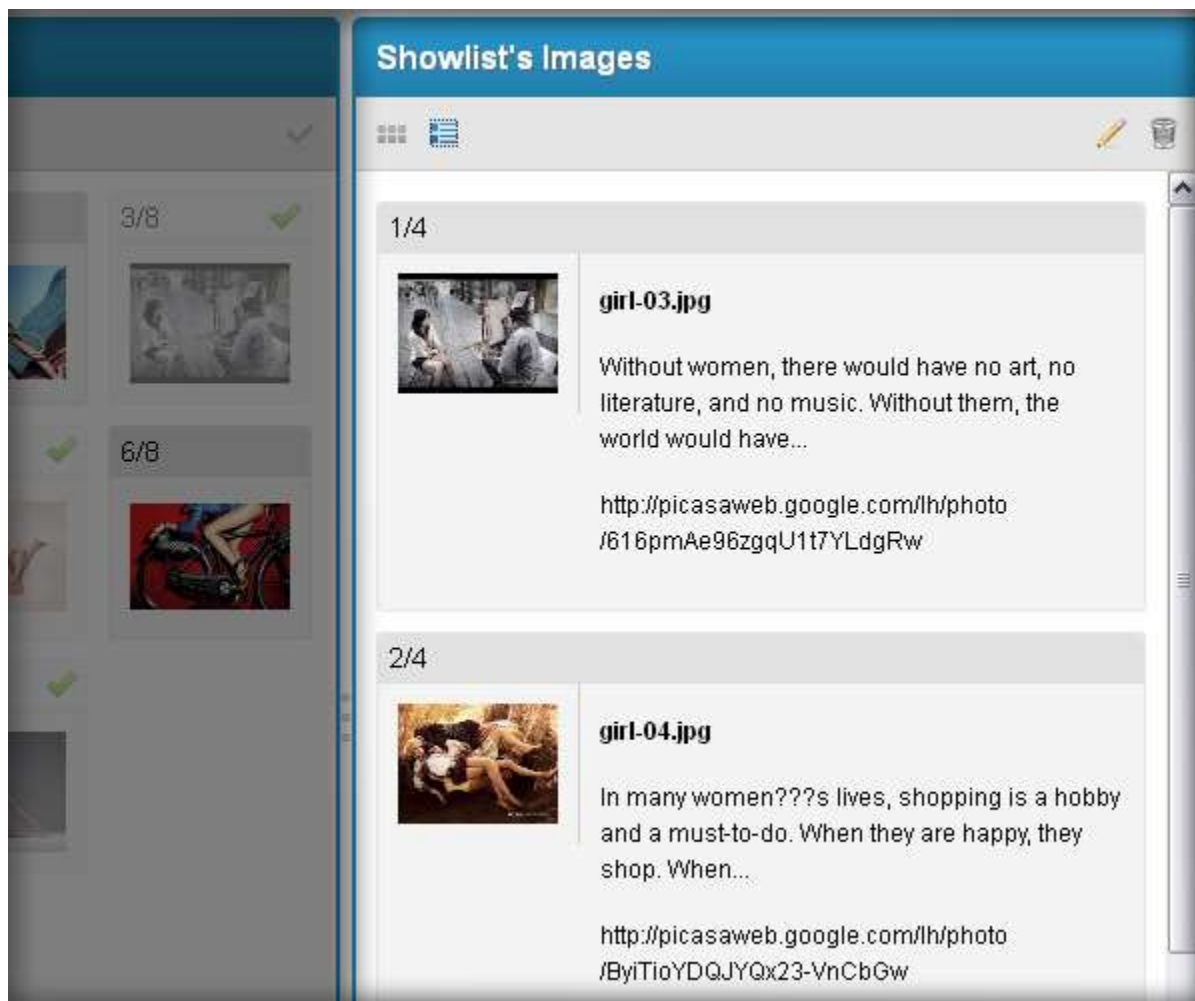

Selecting images for gallery in “Source Images” panel

Get free ebook to learn how to build a Joomla website with easy steps - <http://ow.ly/fh6dL>

Panel “Showlist’s Images”

In panel **Showlist’s Images** you will see images currently added to the showlist. Here you can reorder images and edit image details like title, description or image link.

Viewing image details in “Showlist’s Images” panel

Attention!

It’s very important to understand that JSN ImageShow utilizes images **directly from the source** and doesn’t make copies of them on your server.

Get free ebook to learn how to build a Joomla website with easy steps - <http://ow.ly/fh6dL>

Thumbnails and Details view mode

Images in the showlist can be viewed through the **thumbnail** or **details** mode.

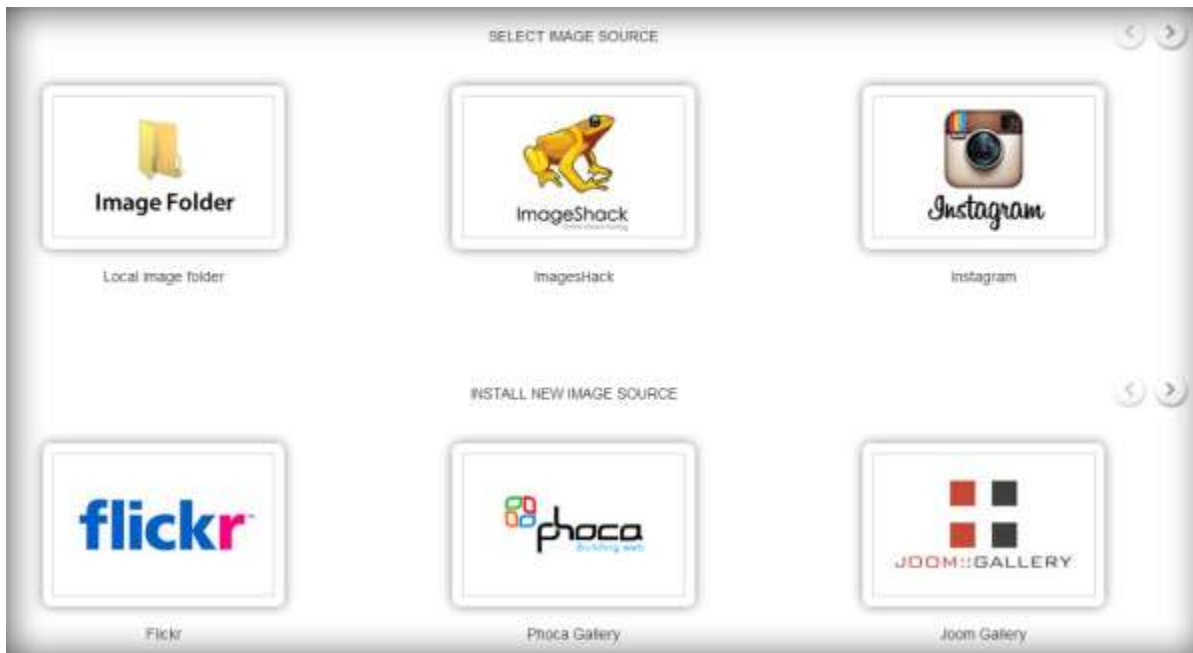

Viewing images in 2 modes

With the **Details Mode** you will see images with all details. In **Thumbnail Mode** you will see many more images within the space, but without image details.

Get free ebook to learn how to build a Joomla website with easy steps - <http://ow.ly/fh6dL>

Getting images from the source

You can get images from 4 defaulted sources: **Local Image Folder**, **Imageshack**, **Instagram** and **Picasa** or 5 additional sources: **Flickr**, **Phoca Gallery**, **Joom Gallery**, **RSGallery2** and **Facebook**.

Getting images from local image folder

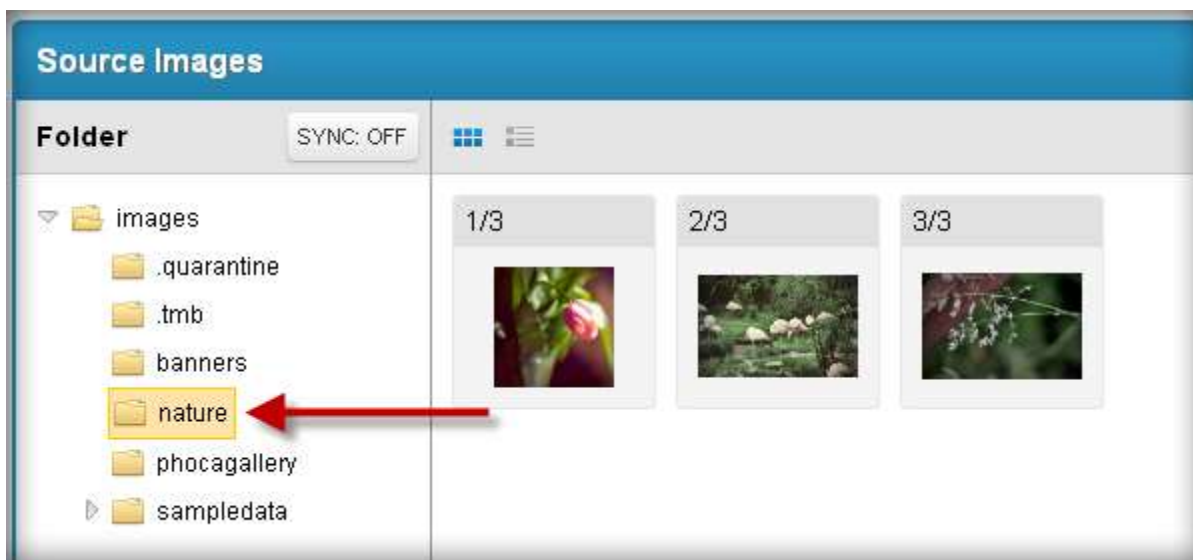

In most cases, you store images in folder **“images”** under Joomla! root folder. JSN ImageShow can get images from the local server folder then present them in the gallery.

In the **Showlist Settings** page, **Showlist image sources** section, select the **Local Image Folder**.

Get free ebook to learn how to build a Joomla website with easy steps - <http://ow.ly/fh6dL>

Select the folder where you store images and drag the desired ones to the **Showlist's Images** panel.

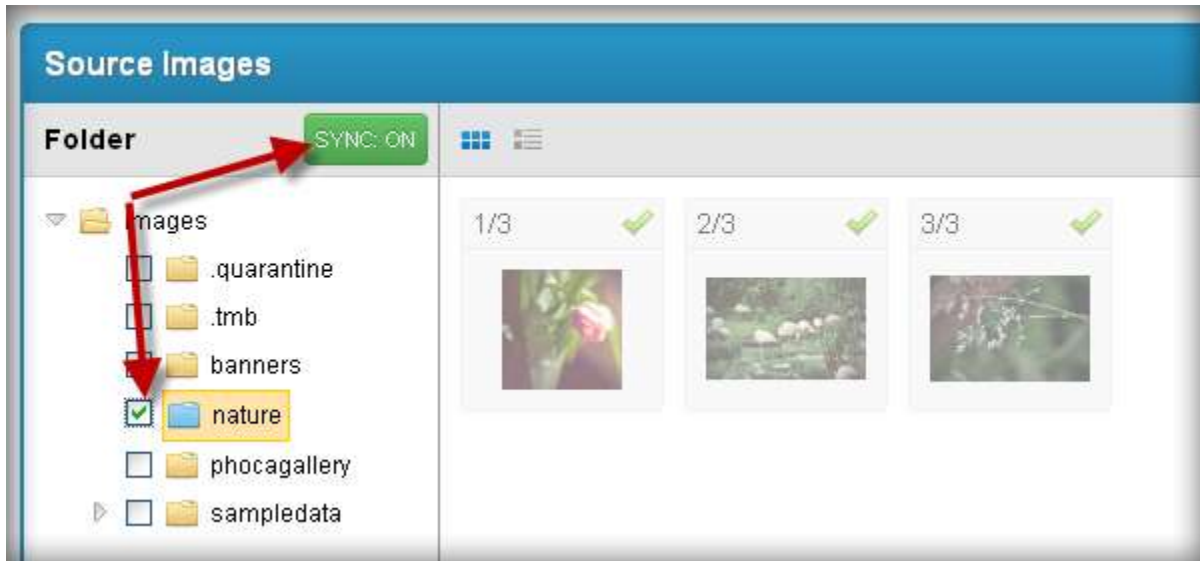

Attention!

Remember that you will see only folders that are located under folder the “**images**” folder in Joomla! root folder.

Synchronizing all images from folders

JSN ImageShow allows you to automatically synchronize all images in the folders to showlist. With this feature enabled, you can add more images to the folder and they will be automatically added to the showlist.

Synchronizing all images from folders to the showlist

To enable synchronization, just click icon **Sync** and select folders which you want to synchronize. All images from the selected folder will appear on **Showlist's Images** panel for verification.

Attention!

- In Sync Mode, image details are fixed and cannot be edited.
- If you sync images from Phoca & JomGallery, all text format such as bold, italic, strike-through and underline will be applied automatically.

Get free ebook to learn how to build a Joomla website with easy steps - <http://ow.ly/fh6dL>

Getting images from Facebook

JSN ImageShow is able to show images from your Facebook account with all image details preserved. Let's go through this process step by step.

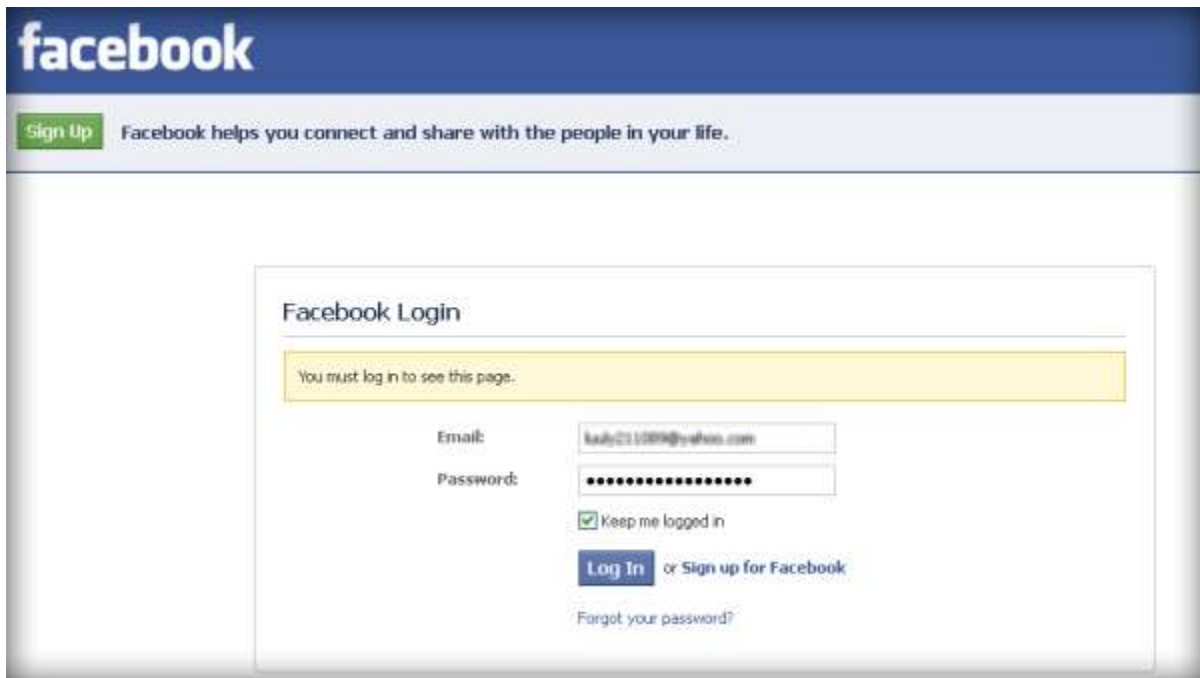

Step 1. Getting Facebook profile data

For presenting images from Facebook you need the following facebook profile data:

- Facebook App ID

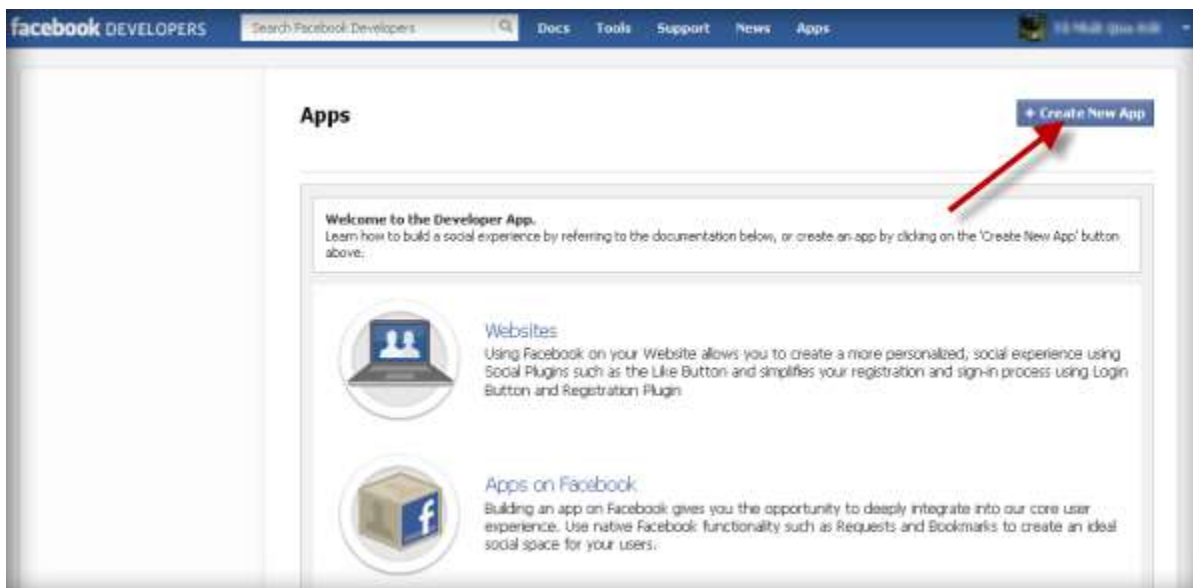

If you already know how to get these profile data, feel free to skip this step. Otherwise, take a look at the [video tutorial](#) or follow visual instructions below.

3. Visit the link <https://developers.facebook.com/apps> and login your Facebook account

4. Click "+ Create New App" button in the top right corner

Get free ebook to learn how to build a Joomla website with easy steps - <http://ow.ly/fh6dL>

5. Enter “App Name” and “App Namespace”. For example, “JSN Image” – “jsn-image”

A screenshot of the 'Create New App' form. The form has a blue header with the title 'Create New App'. It contains four input fields: 'App Name' with the value 'JSN Image' and a green 'Valid' status; 'App Namespace' with the value 'jsn-image' and a green 'Available' status; 'Locale' with a dropdown menu showing 'English (US)'; and 'Web Hosting' with an unchecked checkbox and the text 'Yes, I would like free web hosting provided by Heroku (Learn More)'. At the bottom, there's a line of text: 'By proceeding, you agree to the Facebook Platform Policies'. To the right of this text are two buttons: 'Continue' and 'Cancel'.

6. Enter the security phrase you see in the box, then click “Submit”

A screenshot of the 'Security Check Required' page. It has a blue header with the title 'Security Check Required'. Below the header, it says 'Security Check' and 'Please enter the text below'. There's a distorted image of the text 'WhPkUT'. Below the image, there's a text input field containing 'WhPkUT' and a 'Submit' button. At the bottom, there's a line of text: 'By proceeding, you agree to the Facebook Platform Policies'. To the right of this text are two buttons: 'Submit' and 'Cancel'.

7. Verify your account by adding your mobile phone or credit card, then click “Continue”

8. Confirm your code you receive

Get free ebook to learn how to build a Joomla website with easy steps - <http://ow.ly/fh6dL>

9.

- Enter your domain URL in “*App Domains*” field (without “<http://>” or “www.”)
- Click on “Website with Facebook Login”, for example “<http://localhost>” and enter your site URL “<http://localhost>”, then click “*Save Changes*”
- It’s done now, App ID is shown here.

Get free ebook to learn how to build a Joomla website with easy steps - <http://ow.ly/fh6dL>

The screenshot shows the configuration page for the JSN Image extension. At the top, there is a header section with the extension's logo and name. Below this, the 'Basic Info' section contains several input fields: 'Display Name' (JSN Image), 'Namespace' (jsn-image), 'Contact Email' (luuly211069@yahoo.com), 'App Domains' (localhost), 'Category' (Other), and 'Hosting URL' (You have not generated a URL through one of our partners). The 'App ID' and 'App Secret' are displayed in a box. Below the 'Basic Info' section, there is a section titled 'Select how your app integrates with Facebook'. This section contains a list of options with checkboxes: 'Website with Facebook Login' (checked), 'App on Facebook' (checked), 'Mobile Web' (checked), 'Native iOS App' (checked), 'Native Android App' (checked), and 'Page Tab' (checked). The 'Website with Facebook Login' option has a 'Site URL' field set to 'http://localhost'. A 'Save Changes' button is located at the bottom of the page.

Step 2. Setting up Facebook profile and selecting images

Now, when Facebook profile data are ready, it's time to use them in JSN ImageShow.

1. In **Showlist Settings** page, **Install New Image Source** section, select to install **Facebook**.
2. In **Showlist image sources** section, select **Facebook** and configure parameters as follows:
 - a. **Profile Title:** Input any name you like
 - b. **Facebook Image Source:** Select "*User Profile*" or "*Page*"
 - c. **Facebook App ID:** Input the Facebook App ID obtained in step 1
 - d. **Thumbnail Max Size:** Select the thumbnail size you want to use (in pixel)
 - e. **Image Max Size:** Select the image size you want to use (in pixel)
3. Click button **Save**.

Getting images from Picasa

JSN ImageShow is able to show images from your Picasa account with all image details preserved. Let's go through this process step by step.

1. In **Showlist Settings** page, **Showlist Image Sources** section, select **Picasa**.
2. Check the box **Create new profile** and configure and set parameters as follows:
 - a. **Profile Title:** Input any name you like
 - b. **Google User Name:** Input the name that comes before “@” symbol in the Google email address.

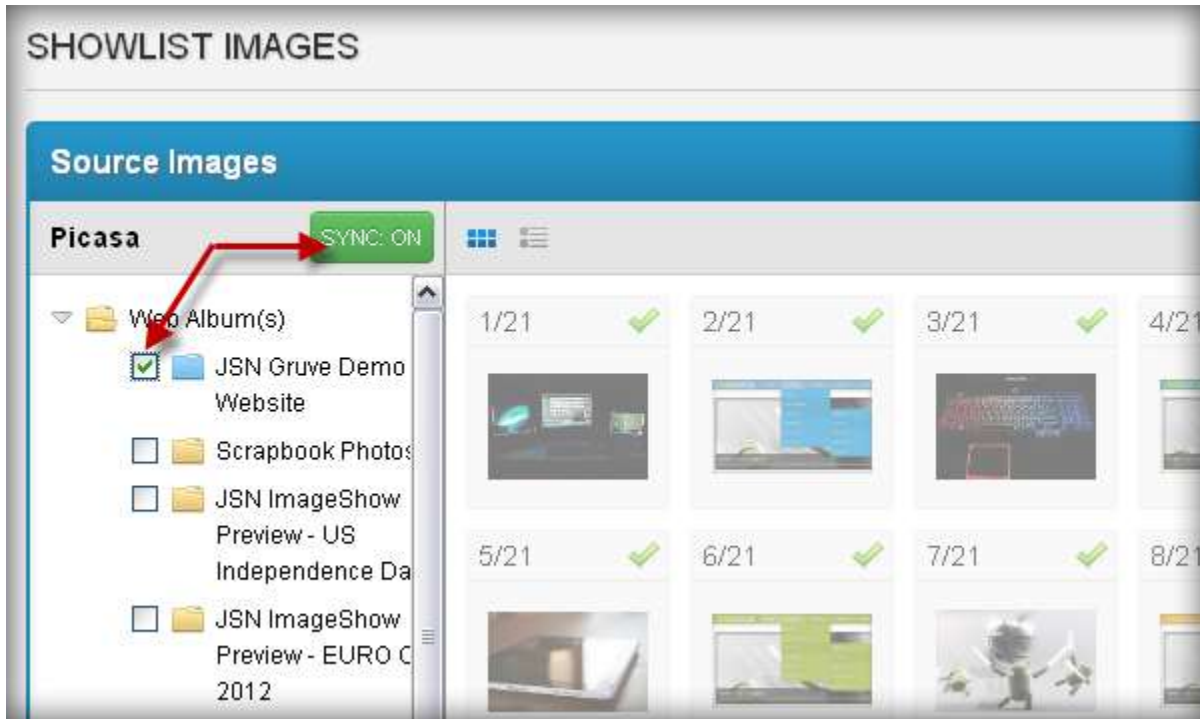

- c. **Thumbnail Max Size (px):** Select the size of the thumbnail images.
 - d. **Image Max Size (px):** Select the size of the images.
3. Click button **Create**.

Now, all Picasa albums will be listed from where you can select the desired images.

Get free ebook to learn how to build a Joomla website with easy steps - <http://ow.ly/fh6dL>

Synchronizing all images from folders

JSN ImageShow allows you to automatically synchronize all images in the folders to showlist. With this feature enabled, you can add more images to the folder and they will be automatically added to the showlist.

Synchronizing all images from folders to the showlist

To enable synchronization, just click icon **Sync** and select folders which you want to synchronize. All images from the selected folder will appear on **Showlist's Images** panel for verification.

Attention!

In Sync Mode, image details are fixed and cannot be edited.

Get free ebook to learn how to build a Joomla website with easy steps - <http://ow.ly/fh6dL>

Getting images from JoomGallery, Phoca Gallery and RSGallery2

JSN ImageShow can use images directly from Joomla! extensions [JoomGallery](#), [Phoca Gallery](#) or [RSGallery2](#). This is the great way to utilize existing images without additional image management work.

In **Showlist Settings** page, **Showlist Image Sources** section, select your desired source to install it or to present its images.

Getting images from Flickr

JSN ImageShow is able to show images from your Flickr account with all image details preserved. Let's go through this process step by step.

Step 1. Getting Flickr profile data

For presenting images from Flickr you need the following flick profile data:

- **Flickr API Key**
- **Flickr API Secret Key**
- **Flickr Screen Name**

If you already know how to get these profile data, feel free to skip this step. Otherwise, here are instructions:

1. Visit the link <http://www.flickr.com/services/apps/create/apply/>
2. Choose an appropriate option for your gallery. If you are creating a personal gallery, then click button **“APPLY FOR A NON – COMMERCIAL KEY”**.

The screenshot shows the 'The App Garden' website interface. At the top, there's a navigation bar with links: 'Create an App', 'API Documentation', 'Feeds', and 'What is the App Garden?'. Below this, a pink text prompt reads: 'First, we need to know whether or not your app is commercial.' The main content area is divided into two columns. The left column is titled 'Choose Non-Commercial if:' and lists four bullet points: 'Your app doesn't make money.', 'Your app makes money, but you're a family-run, small, or independent business.', 'You're developing a product which is not currently commercial, but might be in the future.', and 'You're building a personal website or blog where you are only using your own images.' Below this list is a blue button labeled 'APPLY FOR A NON-COMMERCIAL KEY'. The right column is titled 'Choose Commercial if:' and lists two bullet points: 'You or your agency works for a major brand.' and 'AND one of the following:'. Under 'AND one of the following:', there are three bullet points: 'You want to make a profit.', 'You charge a fee for your product or services.', and 'You will bring Flickr content into your product and intend to sell those services.' Below this list is a blue button labeled 'APPLY FOR A COMMERCIAL KEY'. The word 'or' is centered between the two columns.

Get free ebook to learn how to build a Joomla website with easy steps - <http://ow.ly/fh6dL>

3. Input some information about your gallery.

The screenshot shows the 'The App Garden' page on Flickr. At the top, there are links: 'Create an App', 'API Documentation', 'Feeds', and 'What is the App Garden?'. Below this is a heading 'Tell us about your app:'. The form contains the following fields and elements:

- Owner: JoomlaShine.com Images
- Information icon and text: 'This app will be associated with your JoomlaShine.com Images account. You will not be able to change this after you submit your application.'
- Field 'What's the name of your app?': 'My JSN imageShow'
- Field 'What are you building?': 'I want to show my Flickr images on the website.' (with a subtext: '(And trust us when we say you can't be detailed enough)')
- Two checked checkboxes:
 - 'I acknowledge that Flickr members own all rights to their content, and that it's my responsibility to make sure that my project does not contravene those rights.'
 - 'I agree to comply with the [Flickr API Terms of Use](#).'
- Buttons: 'SUBMIT' and 'Cancel'

4. Save your **Key** and **Secret** in a text file on your computer.

The screenshot shows the 'The App Garden' page on Flickr after a new app has been created. The page displays the following information:

- Header: 'flickr from YAHOO!' and navigation links: 'Home', 'You', 'Organize & Create', 'Contacts', 'Groups', 'Explore', 'Upload'.
- Links: 'Create an App', 'API Documentation', 'Feeds', 'What is the App Garden?'
- Message: 'Done! Here's the API key and secret for your new app:'
- App Name: 'My JSN imageShow' (with a gear icon)
- Key: 'e2dc4151b8f84e6' (highlighted in yellow)
- Secret: 'c7992d' (highlighted in yellow)
- Links: 'Edit app details', 'Edit auth flow for this app', 'View all Apps by You'
- Section: 'What to do next'
- Text: 'If your key is to use in an application that someone else developed, for example to display your own or your group's photos on a blog, then you're all done!'
- Text: 'If your key is for an app that you're developing, here are things to help you build and promote your app:'

Get free ebook to learn how to build a Joomla website with easy steps - <http://ow.ly/fh6dL>

5. On the top, you will see **Flickr Screen name**, which also need to be saved on a text file in your computer.

Step 2. Setting up Flickr profile and selecting images

Now, when Flickr profile data are ready, it's time to use them in JSN ImageShow.

1. In **Showlist Settings** page, **Install New Image Source** section, select to install **Flickr**.
2. In **Showlist image sources** section, select **Flickr** and configure parameters as follows:
 - a. **Profile Title:** Input any name you like
 - b. **API Key:** Input the Flickr API Key obtained in step 1
 - c. **API Secret Key:** Input the Flickr Secret Key obtained in step 1
 - d. **Flickr Screen Name:** Input the Flickr screen name obtained in step 1
 - e. **Image Size:** Select **Medium** option for the most optimal result.
3. Click button **Create**.

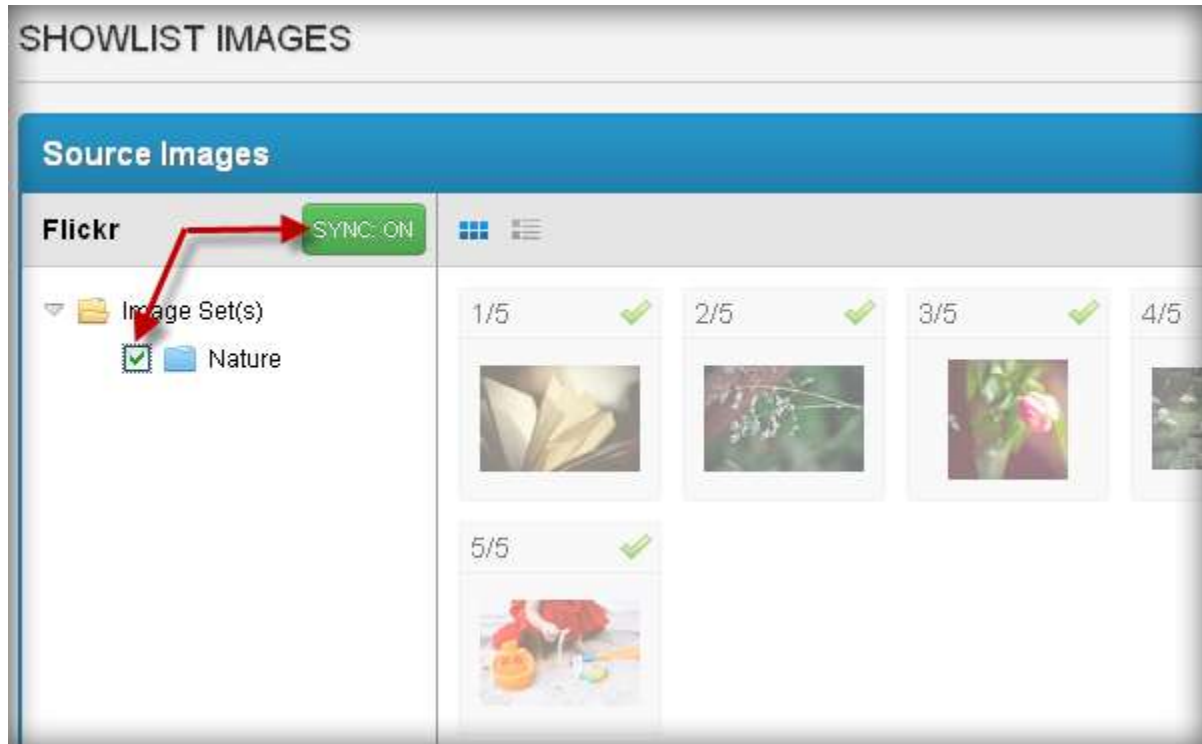

Now, all Flickr sets will be listed from where you can select desired images.

Attention!

All the above steps only need to be done once. Next time, when creating a new showlist, you can just select the already created Flickr profile.

Synchronizing all images from folders

JSN ImageShow allows you to automatically synchronize all images in the folders to showlist. With this feature enabled, you can add more images to the folder and they will be automatically added to the showlist.

Synchronizing all images from folders to the showlist

To enable synchronization, just click icon **Sync** and select folders which you want to synchronize. All images from the selected folder will appear on **Showlist's Images** panel for verification.

Attention!

In Sync Mode, image details are fixed and cannot be edited.

Getting images from Instagram

JSN ImageShow is able to show images from your Instagram account with all image details preserved. Let's go through this process step by step.

Step 1. Getting Instagram profile data

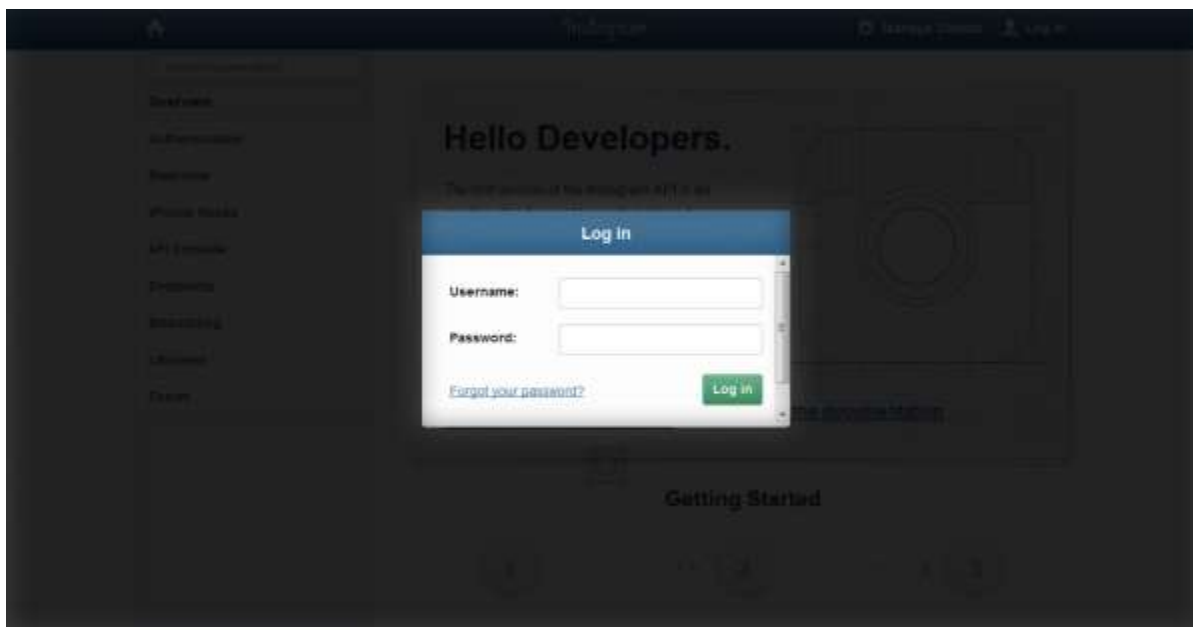

For presenting images from Instagram you need the following Instagram profile data:

- Instagram App ID

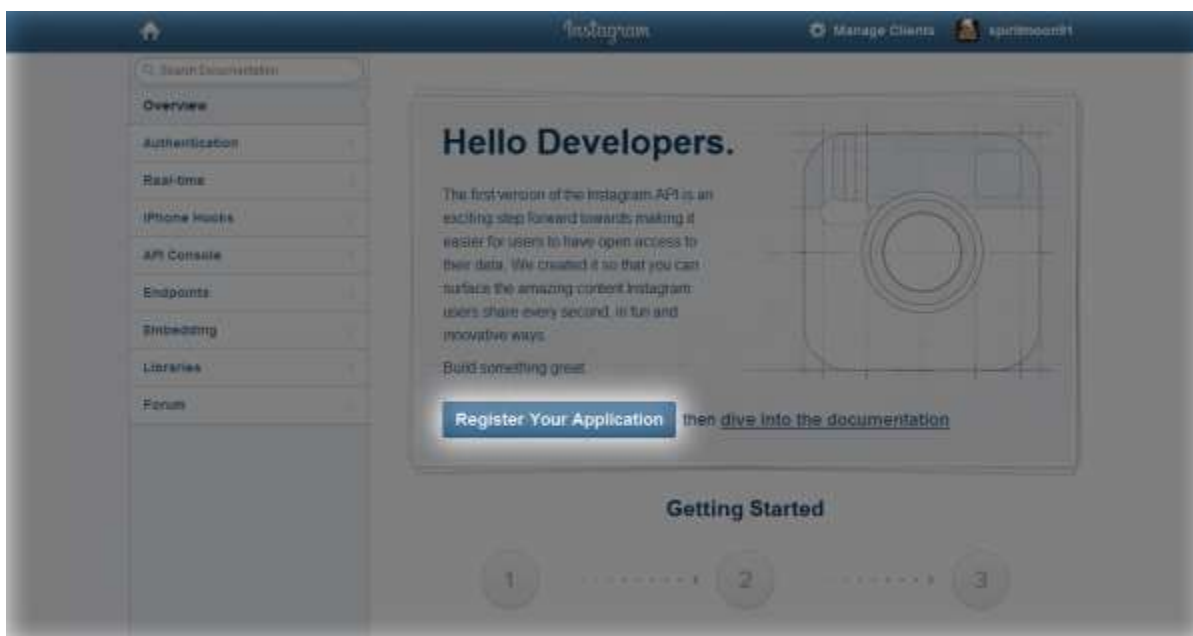

If you already know how to get these profile data, feel free to skip this step. Otherwise, take a look at the [video tutorial](#) or follow visual instructions below.

1. Visit the link <http://instagram.com/developer#> and login your Instagram account

The screenshot shows a web form titled "Register new OAuth Client". It contains several input fields: "Application Name" with the value "JSN Imageshow", "Description" with the value "JSN Imageshow demo", "Website" with the value "http://localhost:81/j25/", and "OAuth redirect_uri" with the value "http://localhost:81/j25/plugins/jsnimageshow/sourceinst". Below the "OAuth redirect_uri" field is a note: "The redirect_uri specifies where we redirect users after they have chosen whether or not to authenticate your application." At the bottom of the form are two buttons: "Register" (green) and "Cancel" (grey).

In **Showlist Settings** page, **Install New Image Source** section, select to install **Instagram**.

In **Showlist image sources** section, select **Instagram** and configure parameters as follows:

- a. **Profile Title:** Input any name you like
- b. **Redirect URL:** Copy this filed and copy to the field OAuth redirect_uri on Instagram developer site

Enter "Website" with the domain of your website and "OAuth redirect_uri" with the url received

Attention!

All the above steps only need to be done once. Next time, when creating a new showlist, you can just select the already created Instagram profile.

Please consider the copyright when using other user's images

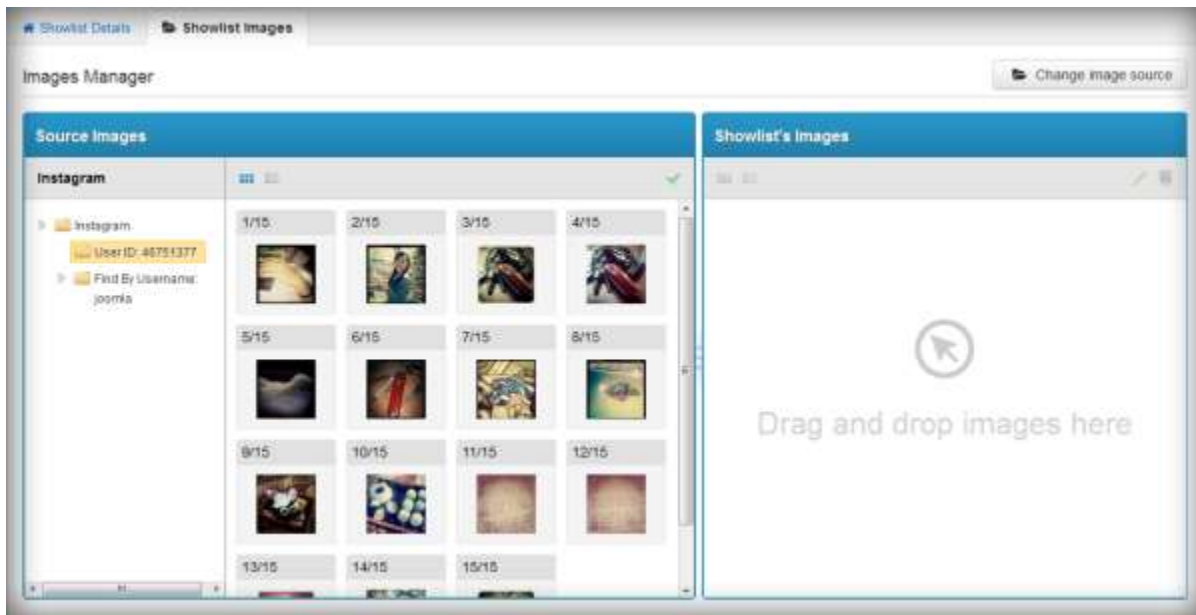

Step 2. Setting up Instagram profile and selecting images

Now, when Instagram profile data are ready, it's time to use them in JSN ImageShow.

1. In **Showlist Settings** page, **Install New Image Source** section, select to install **Instagram**.
2. In **Showlist image sources** section, select **Instagram** and configure parameters as follows:
 - a. **Profile Title:** Input any name you like
 - b. **Client ID:** Input the Client ID obtained after entering the redirect url on the Instagram developer website
 - c. **Client Secret:** Input the Client Secret obtained after entering the redirect url on the Instagram developer website
 - d. **Find Username (Optional):** Insert the username that you want to get Images from

Click button **Save**.

Now, all Instagram sets will be listed from where you can select desired images.

Getting images from Image Shack

JSN ImageShow is able to show images from your Image Shack account with all image details preserved. Let's go through this process step by step.

1. In **Showlist Settings** page, **Showlist Image Sources** section, select **Image Shack**.

Check the box **Create new profile** and configure and set parameters as follows:

- a. **Profile Title:** Input any name you like

Get free ebook to learn how to build a Joomla website with easy steps - <http://ow.ly/fh6dL>

b. **User Name:** Input the Image Shack user name.

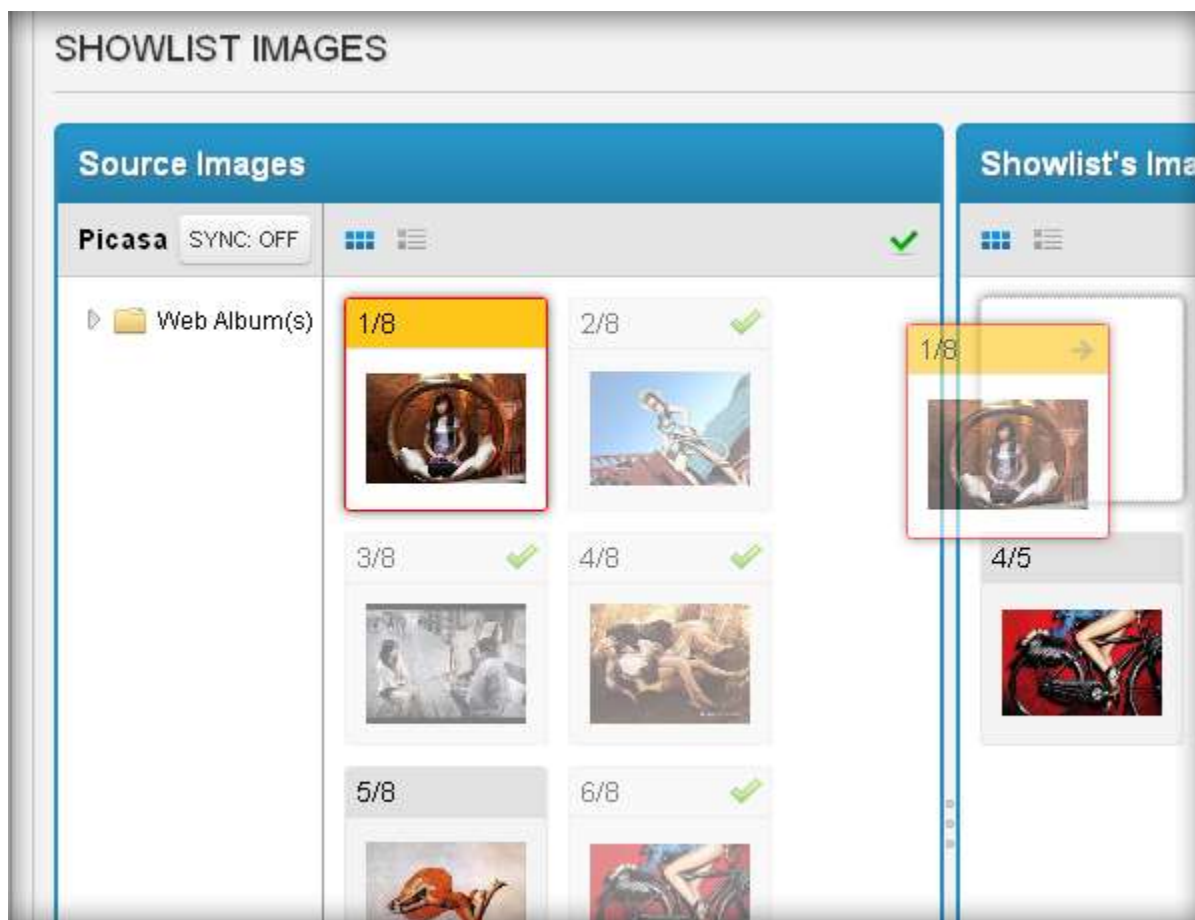

2. Click button **Save**.

Now, all Image Shack albums will be listed from where you can select the desired images.

Showlist images operations

Adding images to the showlist

As mentioned above, it's very easy to add images to showlist. You just select images in panel **Source Images** and drag them to panel **Showlist's Images**.

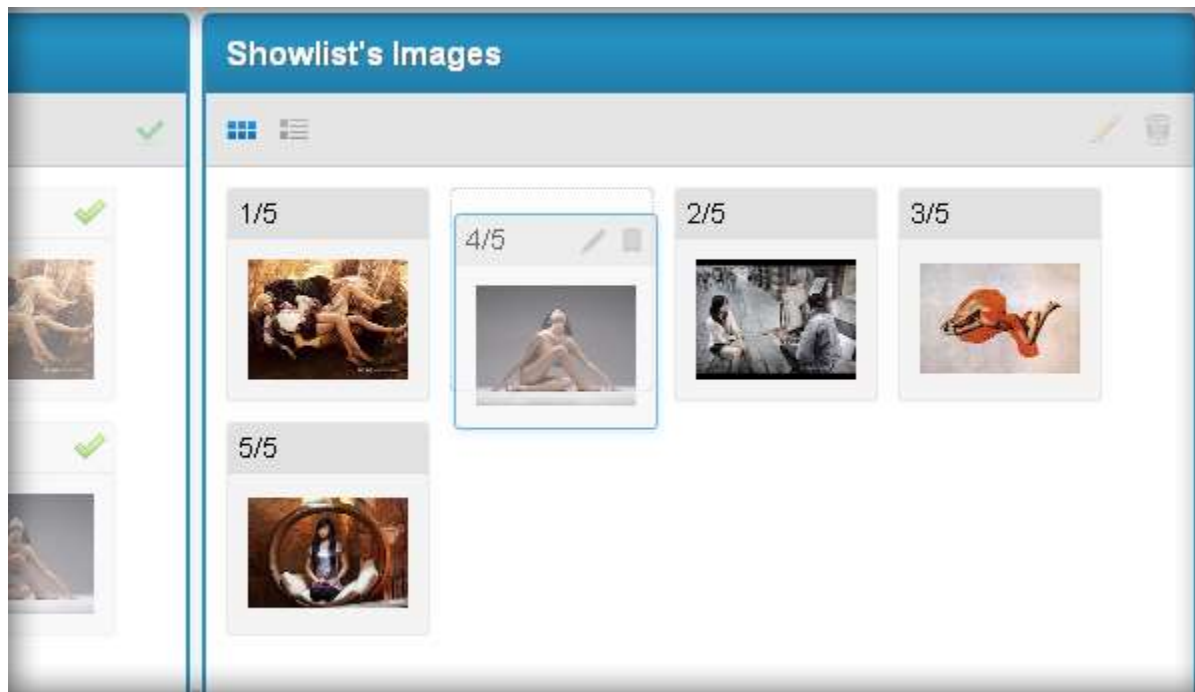

Adding images to the showlist with drag and drop operation

Get free ebook to learn how to build a Joomla website with easy steps - <http://ow.ly/fh6dL>

Sorting images in the showlist

After the images are added to the showlist, you can sort them into the correct order. Just drag the image and move it to the desired position.

Sorting images by using drag and drop operation

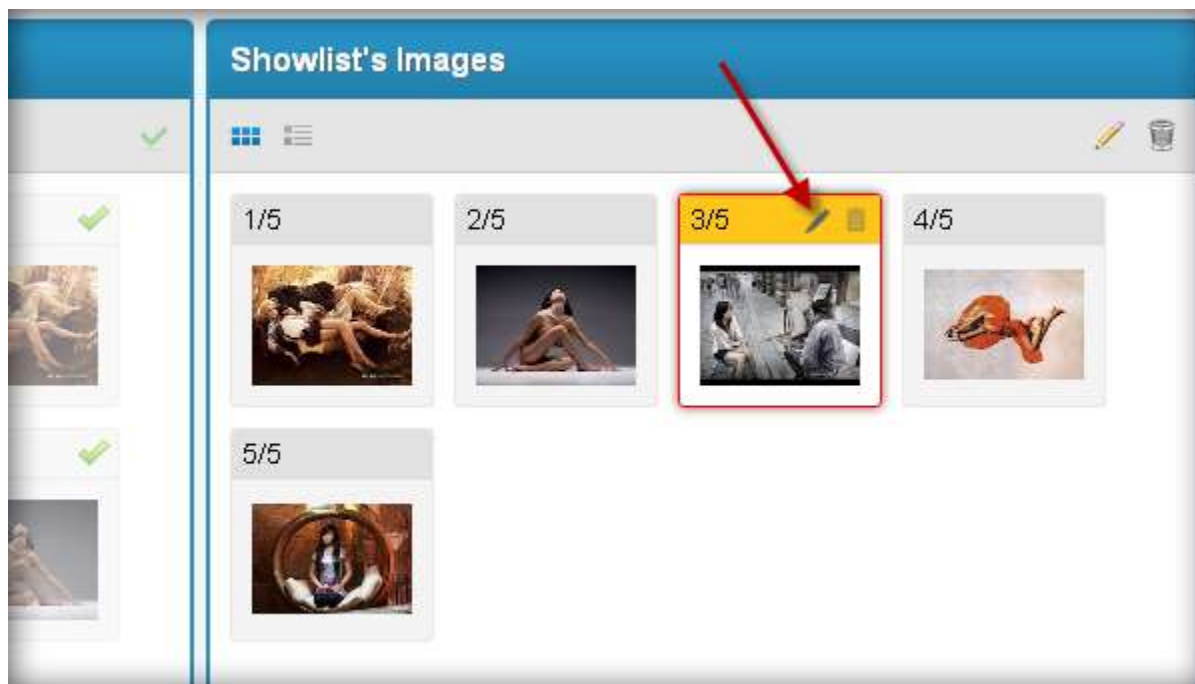

Editing image details

By default, all image details are inherited from the original sources as follows:

Image source	Image Title	Image Description	Image Link
Local Image Folder	The image file name	N/A	The location of image file on server
Facebook	N/A	The image description defined in Facebook	The Facebook page presenting the image.
Picasa	The image title defined in Picasa	The image description defined in Picasa	The Picasa page presenting the image.
Flickr	The image title defined in Flickr	The image description defined in Flickr	The Flickr page presenting the image.
PhocaGallery	The image title defined in Phoca Gallery	The image description defined in Phoca Gallery	The Phoca Gallery page presenting the image.
JoomGallery	The image title defined in JoomGallery	The image description defined in JoomGallery	The JoomGallery page presenting the image.
RSGallery2	The image title defined in RSGallery2	The image description defined in RSGallery2	The RSGallery2 page presenting the image.

You can override the default image details and set your own by clicking on icon **Edit** on each image.

Get free ebook to learn how to build a Joomla website with easy steps - <http://ow.ly/fh6dL>

All default image details can be overridden if necessary

Next you can define all the custom details you want. They will be used in various ways in the gallery.

Showing Multiple Showlists

JSN ImageShow allows users to display images from multiple showlists with one showcase type at the same time. To show multiple showlists:

- Go to **Menus** -> **Main Menu** (or any menu you like) -> **Add New Menu Item**.
- Choose **Menu Item Type** “JSN ImageShow Galleries Collection”

Get free ebook to learn how to build a Joomla website with easy steps - <http://ow.ly/fh6dL>

Create a web page with multiple showlists

In the **Required settings** section, you can set your multiple showlists with the parameters below:

- **Showlist(s):** Allows you to choose to show as many showlists as you like.
- **Showcase:** The showcase that presents all showlists above.
- **Show title:** Allows you to present the showlist titles or not.
- **Show Description:** Allows you to present the showlist descriptions or not.
- **Description Limitation:** Allows you to set the maximum words for the showlist descriptions.
- **Thumb Dimension:** Allows you to set the size for the showlist thumbnail.
- **Show “View Gallery”:** Allows you to show the text “View Gallery” or not.

Choose Multiple Showlists

Gallery presentation settings

Showcase stores information about how to display images. JSN ImageShow provides theme mechanism which allows you to present the same set of images with multiple layouts and compositions. You can create multiple showcases for different type of presentations and use them to show multiple showlists. This results in incredible amount of images presentation variation.

Creating new showcase

Access to Showcases Manager page

It's very easy to create new showcase.

1. From Joomla! administration choose menu **JSN Imageshow** -> **Showcases**
2. In **Showcases Manager** page, click button **New** on the toolbar. Then you configure the Showcase Details and Save the showcase.

Install a new theme

Theme Classic

Theme Carousel

Theme Flow

Theme Grid

Theme Slider

Theme Strip

6 themes to choose from

Get free ebook to learn how to build a Joomla website with easy steps - <http://ow.ly/fh6dL>

In **Showcase Themes** tab, you can select a theme as you want.

By default, JSN ImageShow is shipped 1 default theme: **Theme Classic**. To install other themes: **Theme Slider**, **Theme Grid**, **Theme Carousel**, **Theme Strip** and **Theme Flow**, you click to that theme and wait for a few seconds.

- **Theme Classic** – A theme which allows you to build terrific galleries by tweaking over 70 parameters

JSN Theme Classic in the front-end

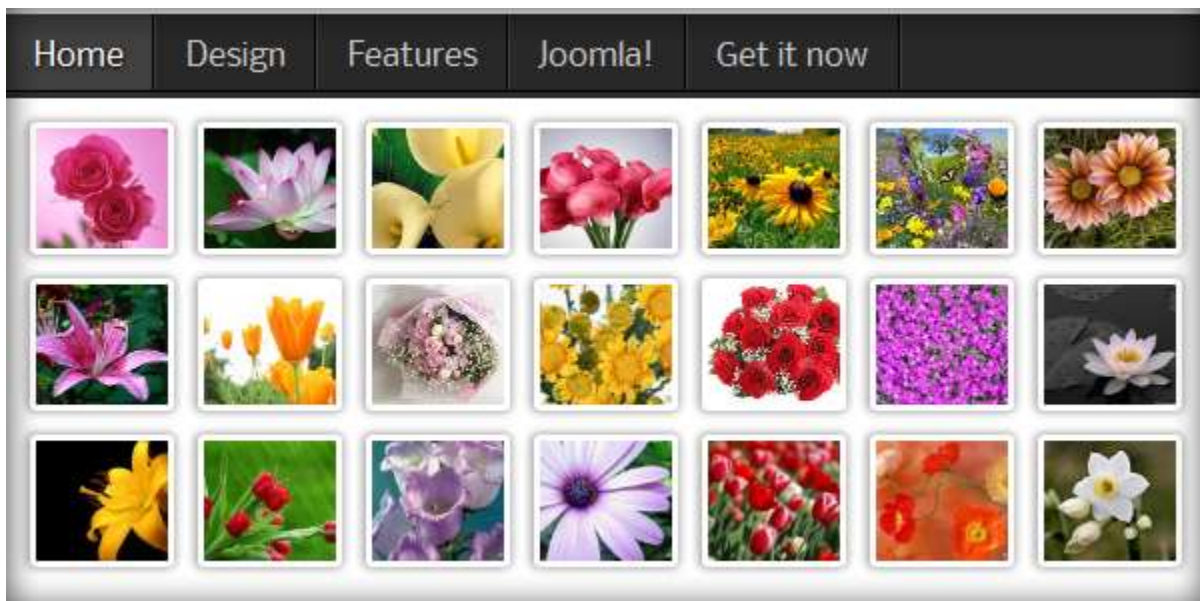

Get free ebook to learn how to build a Joomla website with easy steps - <http://ow.ly/fh6dL>

- **Theme Slider** – With 30+ simple and effective transition parameters, Slider allows you to create stunning photo galleries.

JSN Theme Slider in the front-end

- **Theme Grid** - With 10+ parameters, this Grid brings your photo galleries a new way of presentation with a lot of photos showing on one place.

JSN Theme Grid in the front-end

Get free ebook to learn how to build a Joomla website with easy steps - <http://ow.ly/fh6dL>

- **Theme Carousel** - It helps present all your images in one place thanks to a rounded animation.

JSN Theme Carousel in the front-end

- **Theme Strip** - With more than 25 parameters, Theme Strip can help you make your image gallery look really great.

JSN Theme Strip in the front-end

Get free ebook to learn how to build a Joomla website with easy steps - <http://ow.ly/fh6dL>

- **Theme Flow** - Thanks to 3D effect, an image gallery has a feeling of depth and it makes your photos stand out from the page with Theme Flow. More than 25 parameters are ready for you. Currently, the 3D effect only works on Chrome and Safari browsers.

JSN Theme Flow in the front-end

Setting up showcase details

The screenshot shows the 'JSN ImageShow' configuration window with the 'Details' tab selected. The 'ID' field contains the value '1'. The 'Title' field contains 'Frontpage slideshow'. The 'Published' section has two radio buttons: 'No' and 'Yes', with 'Yes' being selected. The 'Order' dropdown menu shows '8. Frontpage slideshow'. In the 'Dimension' section, 'Overall Width' is set to '100' with a percentage selector, and 'Overall Height' is set to '400' with a 'px' unit selector.

Showcase details configuration

All showlists details are configured by three groups of parameters: **General**, **Appearance** and **Images Loading**. Let's look at parameters in detail.

General

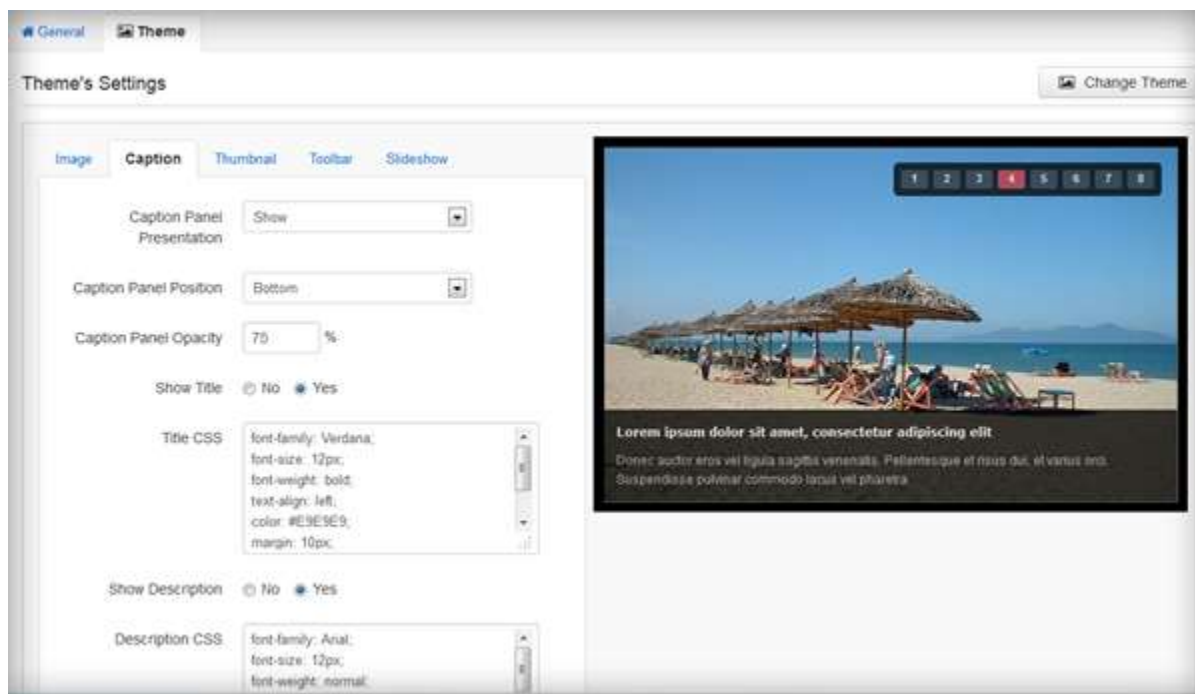

- **Title** – Defines showcase title to identify it-self internally in the product.
- **Published** – Defines whether or not to publish showcase. When showcase is unpublished it can not be selected to present in image presentation.
- **Order** – Defines showcase's position among others.

Dimension

- **Overall Width** – Defines the overall width of gallery presentation. User can specify either pixel or % value.
- **Overall Height** - Defines the overall height of gallery presentation. User can specify only pixel value.

Get free ebook to learn how to build a Joomla website with easy steps - <http://ow.ly/fh6dL>

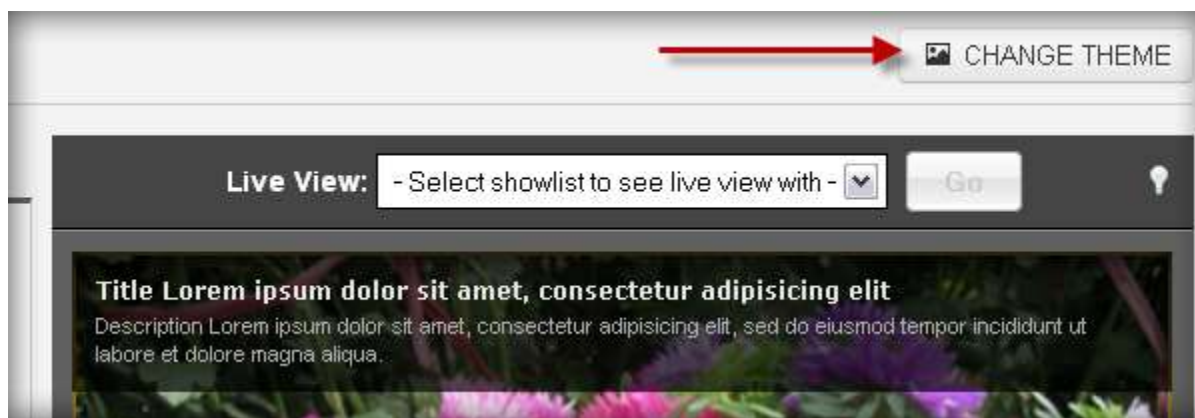

Setting up showcase theme

Showcase theme configuration

As mentioned before JSN ImageShow allows you to use various themes for the gallery. Each theme has a different number of parameters for controlling the gallery behavior.

To change the theme, click “**Change theme**” above the **Live View** window.

Get free ebook to learn how to build a Joomla website with easy steps - <http://ow.ly/fh6dL>

For detailed information about their showcase parameters, please refer to JSN IS theme files in documentation package:

- **[jsn-theme-classic-configuration-manual.pdf](#)**
- **[jsn-theme-slider-configuration-manual.pdf](#)**
- **[jsn-theme-grid-configuration-manual.pdf](#)**

- **[jsn-theme-strip-configuration-manual.pdf](#)**
- **[jsn-theme-flow-configuration-manual.pdf](#)**

You can download them in the [Customer Area](#).

Showtime

You can present JSN ImageShow gallery many ways:

- **Component**
By using component you can present gallery in main body area accessible via menu item.
- **Module**
By using module you can present gallery in any module position supported by your template.
- **Content Plugin**
By using content plugin you can present gallery inside any article.

Show the gallery via menu item (using component)

Presenting gallery via menu item

The easiest way to show gallery via menu item is by using Launch Pad. Perform the following steps to create the menu item to show the gallery.

1. From Joomla! administration choose menu **JSN Imageshow** -> **Launch Pad**
2. In **Launch Pad** page, select **Showlist** and **Showcase** you want to use.
3. In panel **Presentation** select option **Via menu item (component)**, then select the menu where you want to create menu item to present the gallery.
4. Click button **Go** and you will be redirected to menu item settings page to finish the process.

At anytime later, you can edit the menu item in **Menu Manager**.

Get free ebook to learn how to build a Joomla website with easy steps - <http://ow.ly/fh6dL>

Show the gallery in module position (using module)

Presenting gallery in module position

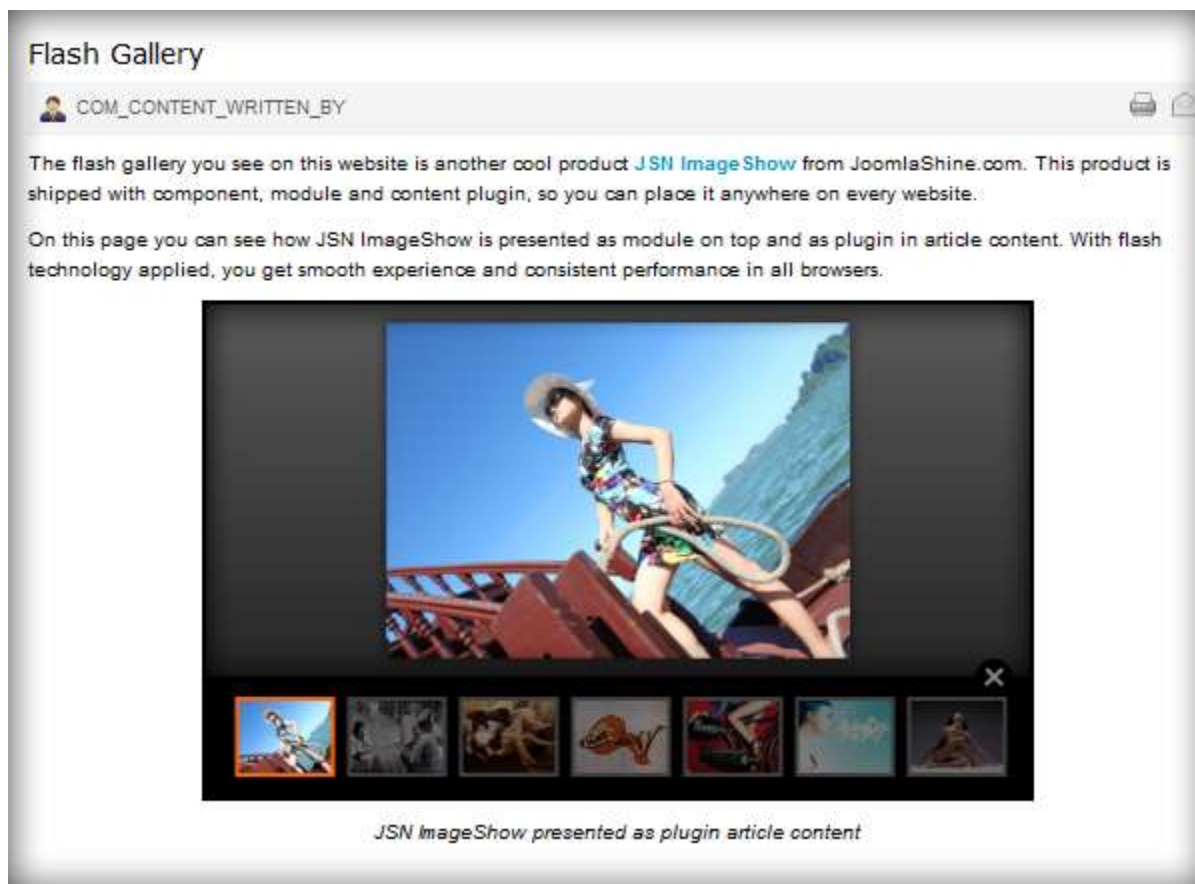

You can display the gallery in any module position available in the template. The instruction below shows you how to do that.

1. From Joomla! administration choose menu **JSN Imageshow** -> **Launch Pad**
2. In **Launch Pad** page, select **Showlist** and **Showcase** you want to use.
3. In panel **Presentation** select option **In module position (module)**
4. Click button **Go** and you will be redirected to module settings page to finish the process.

At anytime later, you can edit module in **Module Manager**.

Get free ebook to learn how to build a Joomla website with easy steps - <http://ow.ly/fh6dL>

Show the gallery inside article (using content plugin)

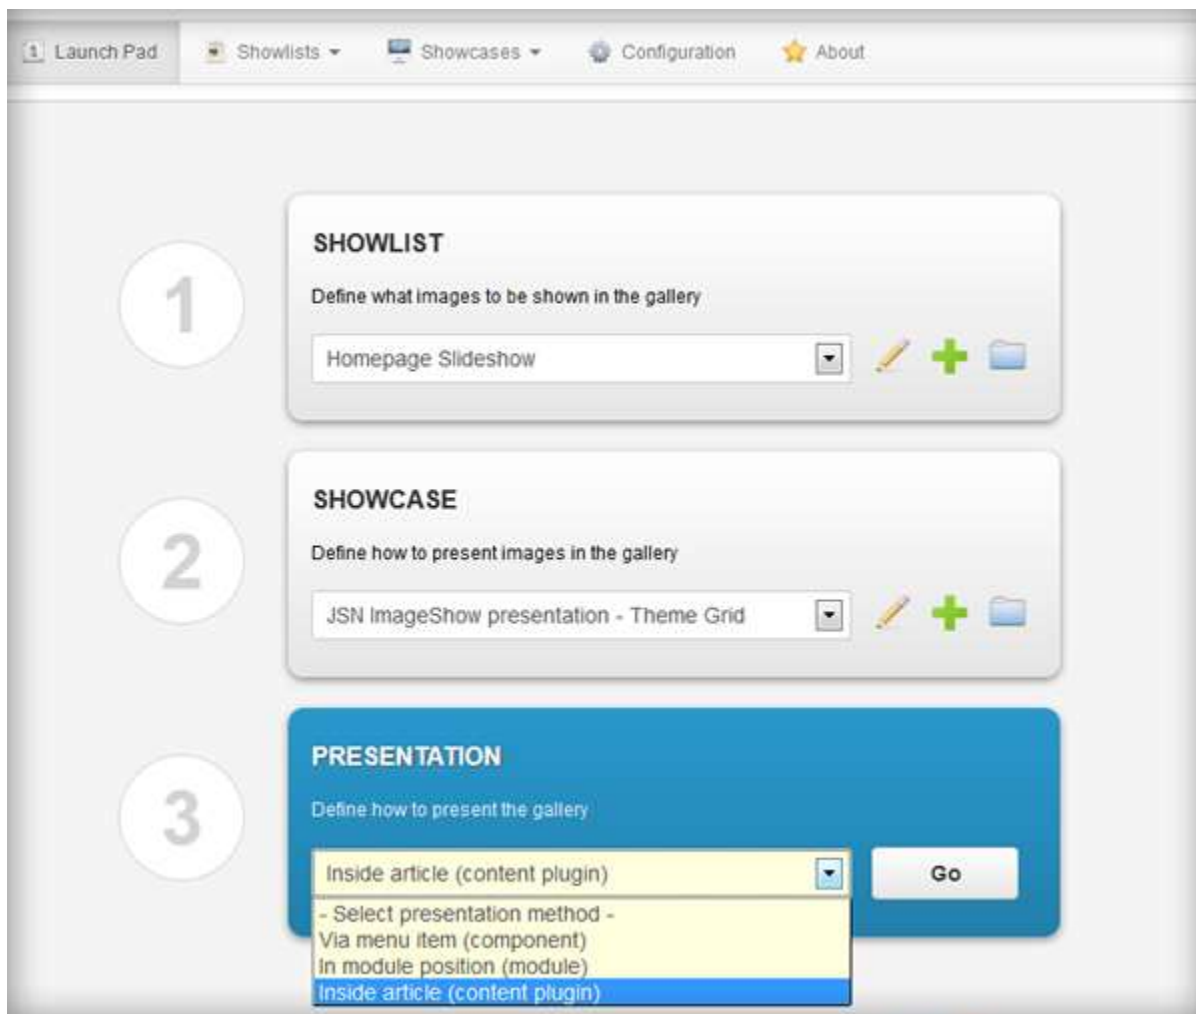

Presenting gallery inside article

There are 3 ways for you to display the gallery directly inside the article. The instruction below shows you how to do that.

Display the gallery via Launch pad

5. From Joomla! administration choose menu **JSN Imageshow** -> **Launch Pad**
6. In **Launch Pad** page, select **Showlist** and **Showcase** you want to use.
7. In panel **Presentation** select option **Inside article (content plugin)**
8. Click button **Go** and you will get the syntax which need to be inserted into your article at the place where you want the gallery to show up.

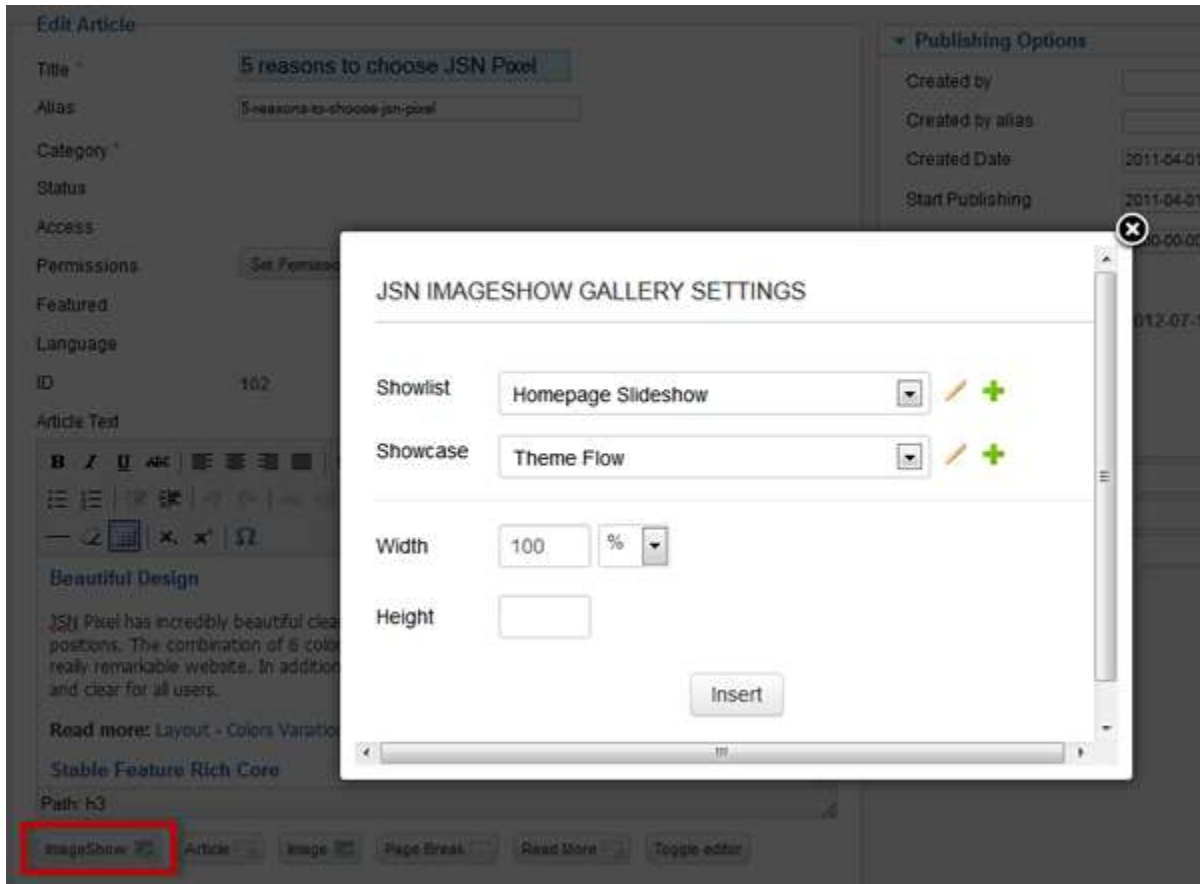

Get free ebook to learn how to build a Joomla website with easy steps - <http://ow.ly/fh6dL>

Display the gallery from article in the back-end

1. From Joomla! administration choose the article you want to insert JSN ImageShow gallery
2. In the **Editor** section, place the cursor at the place you want to show the gallery.
3. Below the **Editor** section, click button **ImageShow**
4. In modal window **JSN ImageShow Gallery Settings**, select Showlist and Showcase you want, define the suitable width, height as you want.
5. Click button **Insert** and you see the syntax inserted into your article.

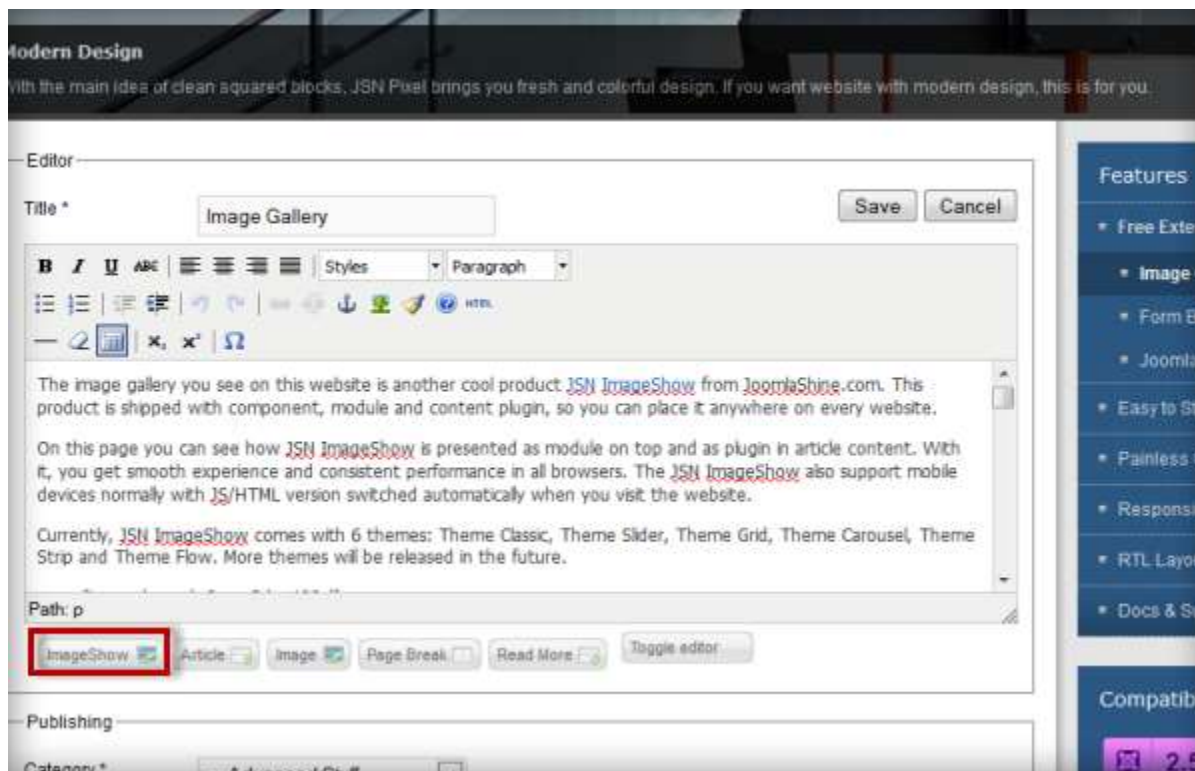

Get free ebook to learn how to build a Joomla website with easy steps - <http://ow.ly/fh6dL>

Display the gallery from article in the front-end

1. From the front-end of your site, login with your account and choose the article you want to insert JSN ImageShow gallery.
2. In the **Editor** section, place the cursor at the place you want to show the gallery.
3. Below the **Editor** section, click button **ImageShow**
4. In modal window **JSN ImageShow Gallery Settings** select Showlist and Showcase you want, define the suitable width or height
5. Click button **Insert** and you see the syntax inserted into your article.

Get free ebook to learn how to build a Joomla website with easy steps - <http://ow.ly/fh6dL>

More about plugin syntax

Basic syntax

In most cases the syntax will be as following: **{imageshow sl=XXX sc=YYY /}**, where:

- **XXX** – showlist ID
- **YYY** – showcase ID

You can Showlist/Showcase ID in either Manager or Settings page.

Additional attributes

Beside the basic, you can define the following additional attributes:

- **w** - Custom gallery width, for example: {imageshow sl=XXX sc=YYY w=500 /}
- **h** - Custom gallery height, for example: {imageshow sl=XXX sc=YYY h=400 /}

Show gallery in modal window

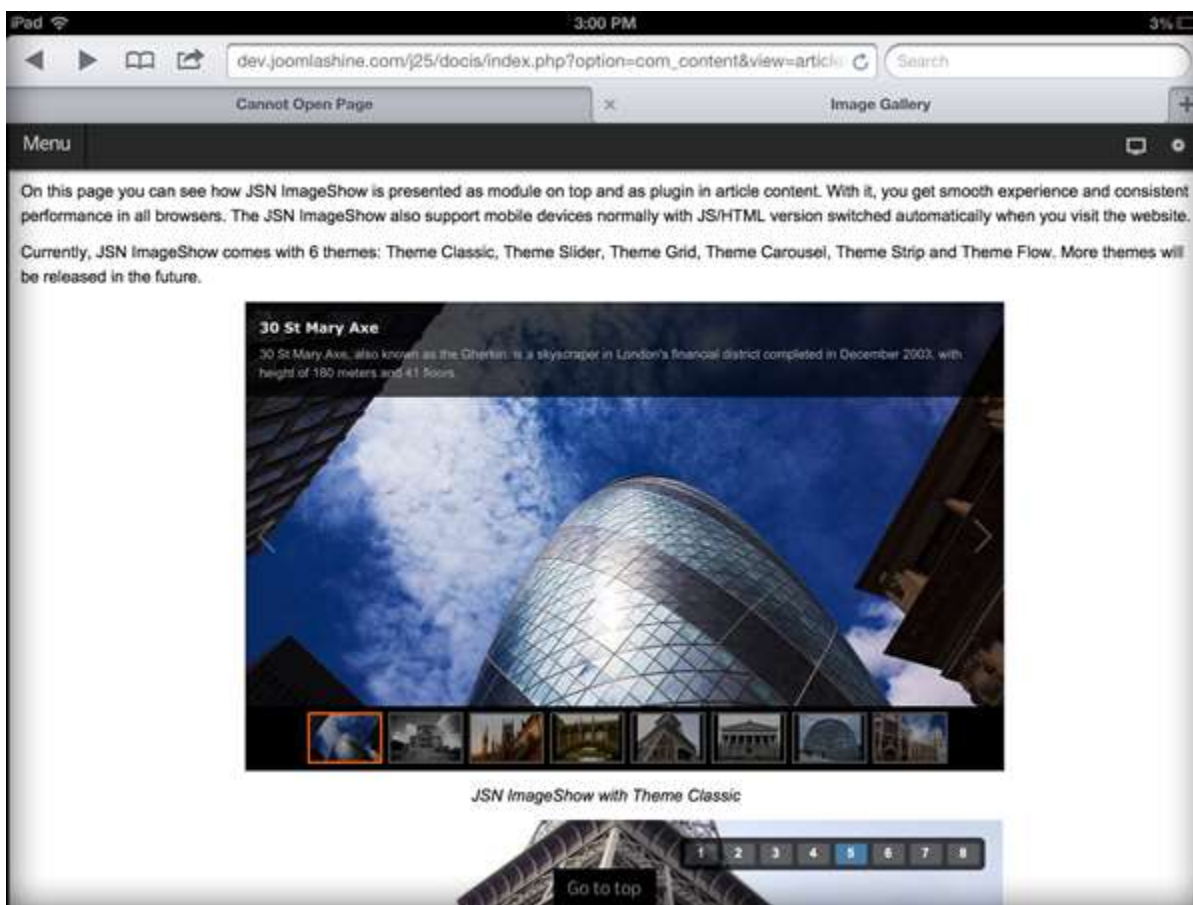

You can create a link clicking onto which will open gallery in modal window.

{imageshow sl=1 sc=1}Click here to see gallery in modal window**{/imageshow}**

Responsive design settings

To set JSN ImageShow responsive on mobile devices, you need to:

1. In **Showcase**: Set **Overall width** 100%

The screenshot shows the 'JSN ImageShow: Showcase Settings' interface. It has two tabs: 'General' and 'Theme'. The 'General' tab is active, showing 'Details' and 'Dimension' sections. In the 'Details' section, the 'ID' is 1, 'Title' is 'Frontpage slideshow', 'Published' is set to 'Yes', and 'Order' is '8. Frontpage slideshow'. In the 'Dimension' section, 'Overall Width' is set to '100' with a percentage dropdown, and 'Overall Height' is set to '400' with a 'px' unit dropdown. A red box highlights the 'Overall Width' field.

2. With different JSN ImageShow presentation methods, you set up different parameters:

- If you present JSN ImageShow via Menu item: In **Menu Item**, you set **Overall width** 100%

The screenshot shows the 'JSN ImageShow Manager: New Menu Item' interface. It has a top bar with 'Save', 'Save & Close', 'Save & New', and 'Cancel' buttons. The main area is divided into two columns. The left column contains fields for 'JSN ImageShow Gallery' (with a 'Select' button), 'JSN ImageShow' (with a dropdown), 'index.php?option=com_imageshow&view=show', 'Published' (dropdown), 'Public' (checkbox), 'Main Menu' (dropdown), 'Menu Item Root' (dropdown), and 'Parent' (dropdown). The right column contains 'Required Settings' and 'Parameters Override (optional)'. Under 'Required Settings', there are 'Showlist' and 'Showcase' sections, each with a dropdown and a green plus icon. Under 'Parameters Override (optional)', 'Overall Width' is set to '100' with a percentage dropdown, and 'Overall Height' is set to '700' with a 'px' unit dropdown. A red box highlights the 'Overall Width' field.

Get free ebook to learn how to build a Joomla website with easy steps - <http://ow.ly/fh6dL>

- If you present JSN ImageShow in a Module Position: In **Module Manager**, you set **Overall width** 100%

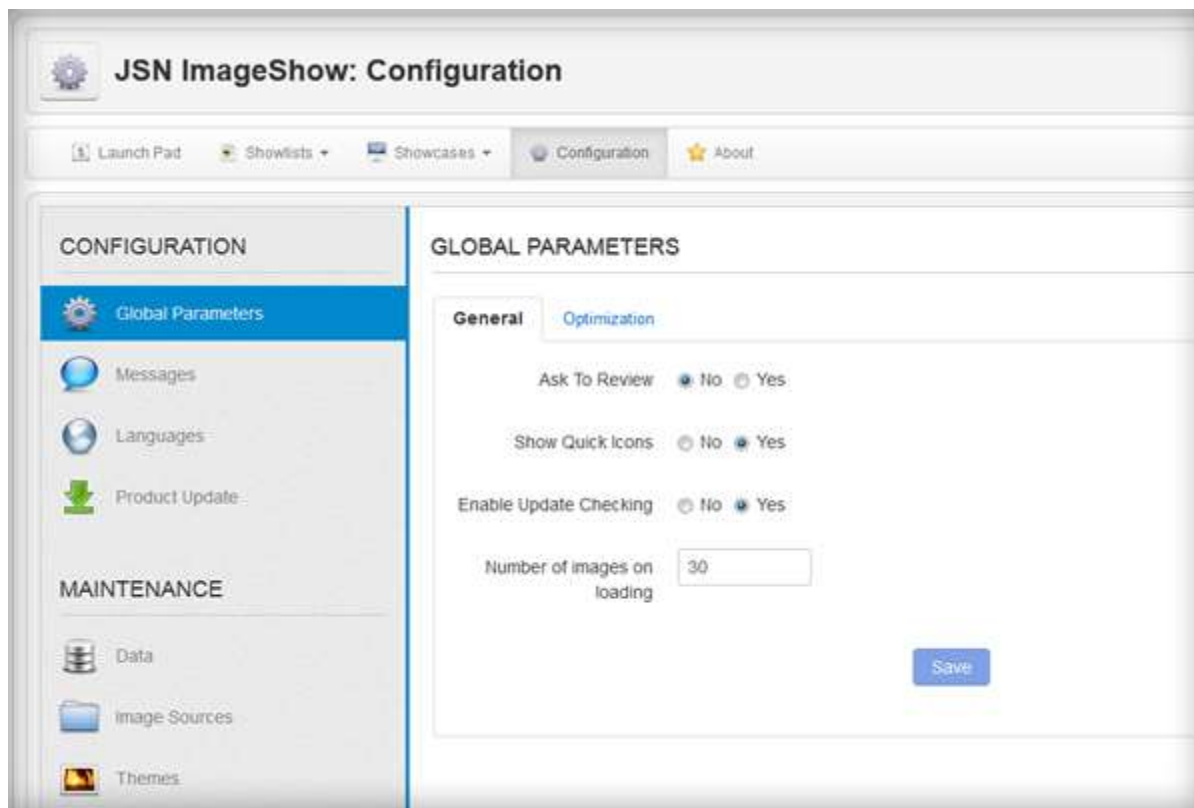

- If you present JSN ImageShow inside an article: In **Article Editor**, you set **Max width** parameter.

```

Configuration & Maintenance

The Configuration panel

In this section you can perform a variety of configurations and maintenance tasks such as data backup / restore, sample data installation, theme management, etc.

Let's take a closer look at each subsection.

Get free ebook to learn how to build a Joomla website with easy steps - <http://ow.ly/fh6dL>

Global Parameters

The screenshot shows the 'Global Parameters' configuration window for the JSN ImageShow extension. At the top, there are three tabs: 'Showcases' (with a monitor icon), 'Configuration' (with a gear icon), and 'About' (with a star icon). The 'Configuration' tab is active. Below the tabs, the title 'GLOBAL PARAMETERS' is displayed. There are two sub-tabs: 'General' (active) and 'Optimization'. Under the 'General' sub-tab, there are four settings: 'Ask To Review' with radio buttons for 'No' (selected) and 'Yes'; 'Show Quick Icons' with radio buttons for 'No' and 'Yes' (selected); 'Enable Update Checking' with radio buttons for 'No' and 'Yes' (selected); and 'Number of images on loading' with a text input field containing the value '30'. A blue 'Save' button is located at the bottom right of the configuration area.

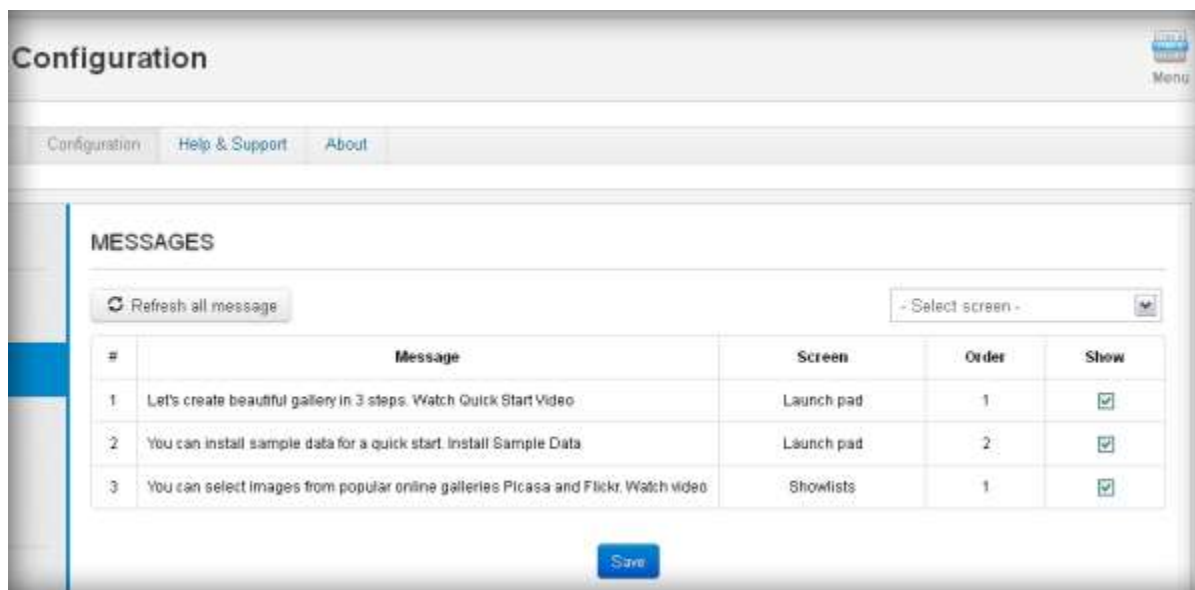

Global parameters configuration

In this section you can configure

- **Show Quick Icons** to define whether or not to show JSN ImageShow quick icons on Joomla! Control panel.
- **Enable Update Checking** to define whether or not to automatically check for new updates
- **Number of images on loading** to define number of images on loading

Save

Languages configuration

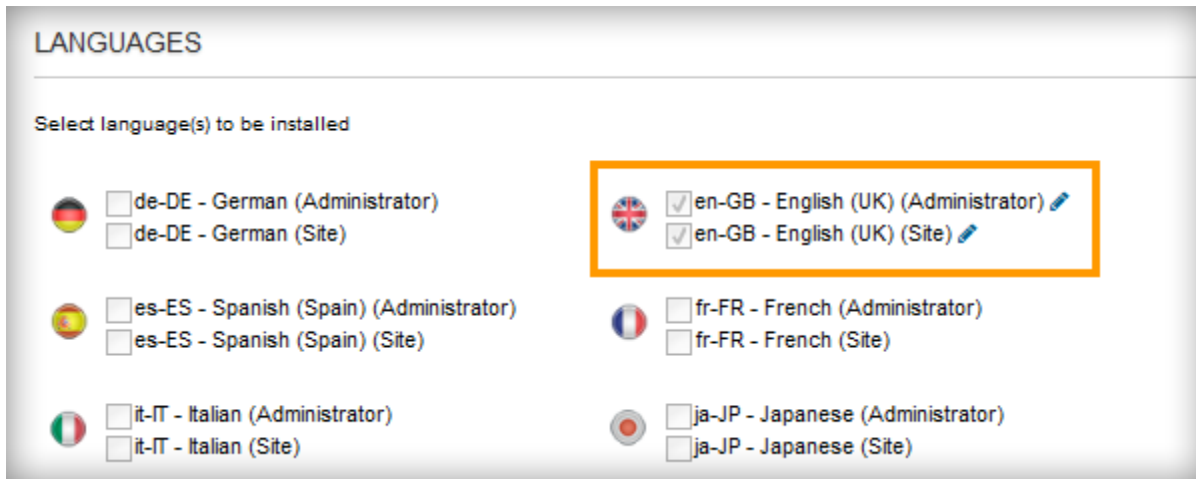

JSN ImageShow GUI text is translated in 12 languages with default English language. Here in section Language, you can choose to activate the language you want.

Get free ebook to learn how to build a Joomla website with easy steps - <http://ow.ly/fh6dL>

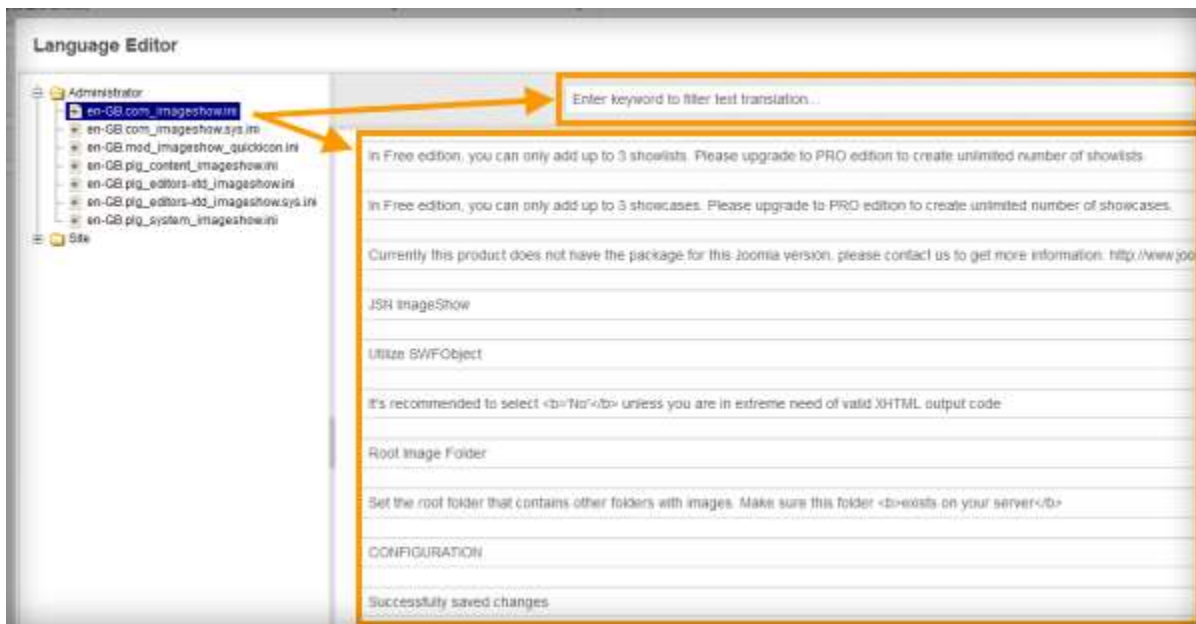

Languages management

You can edit language of JSN ImageShow on both front-end and back-end. It means that you can translate language files and apply it yourself.

To use this function, you go to **Languages** page of JSN ImageShow -> click  to edit the language files.

Then, you can edit all strings in language files at here. Also here, you can search keyword to filter the translation.

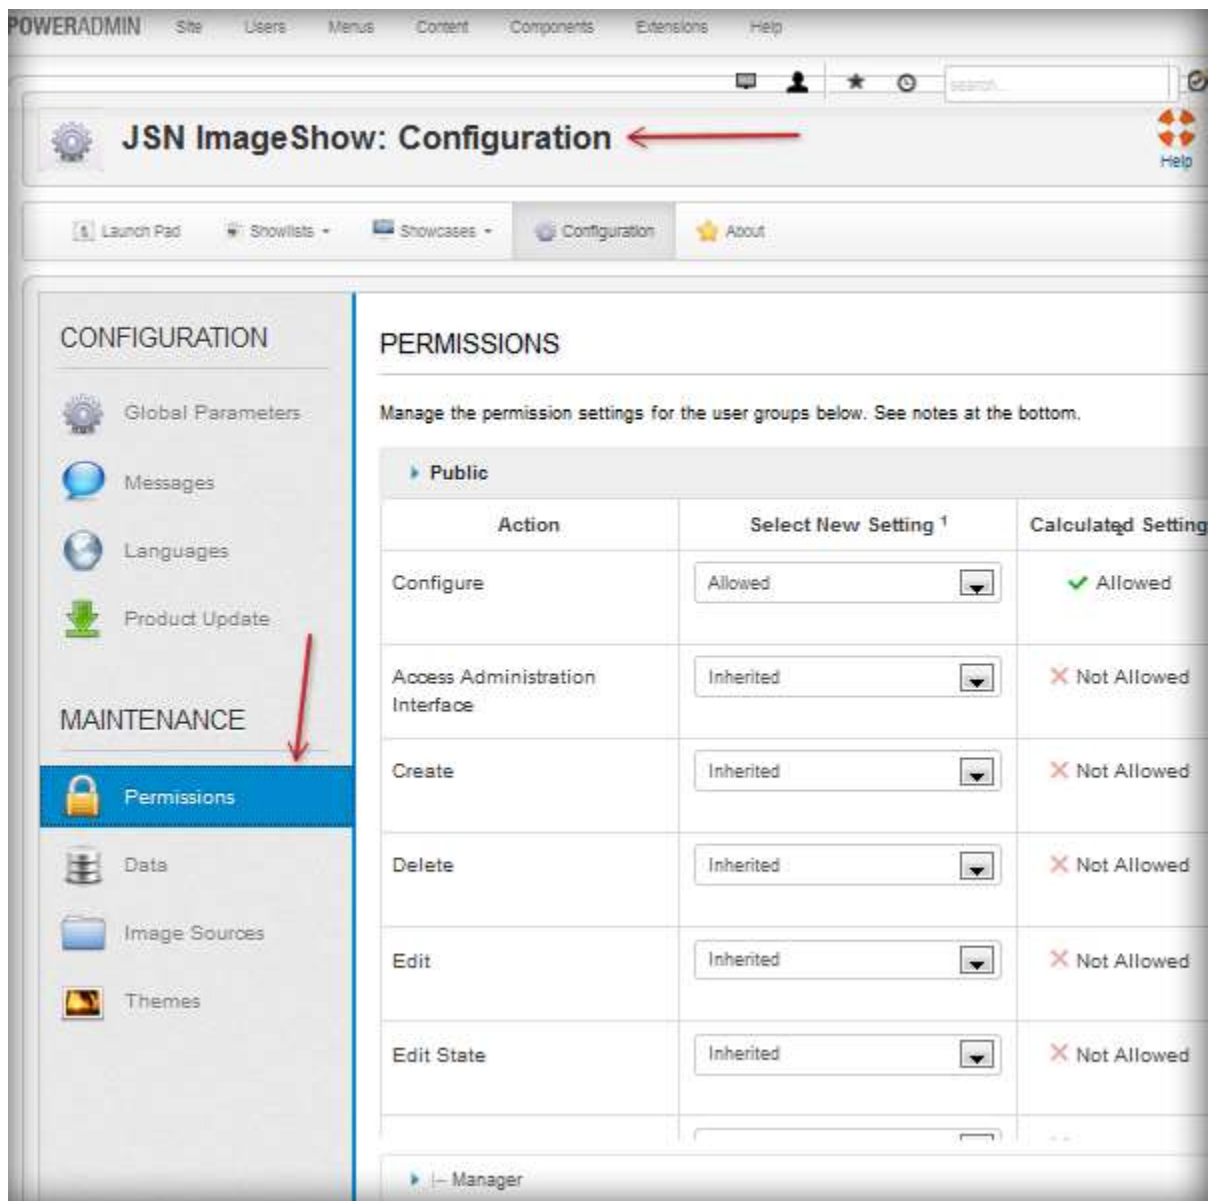

To finish, you click **Save** and **Close** to apply your changes.

Please note that you can edit the language that you are installing on your site only.

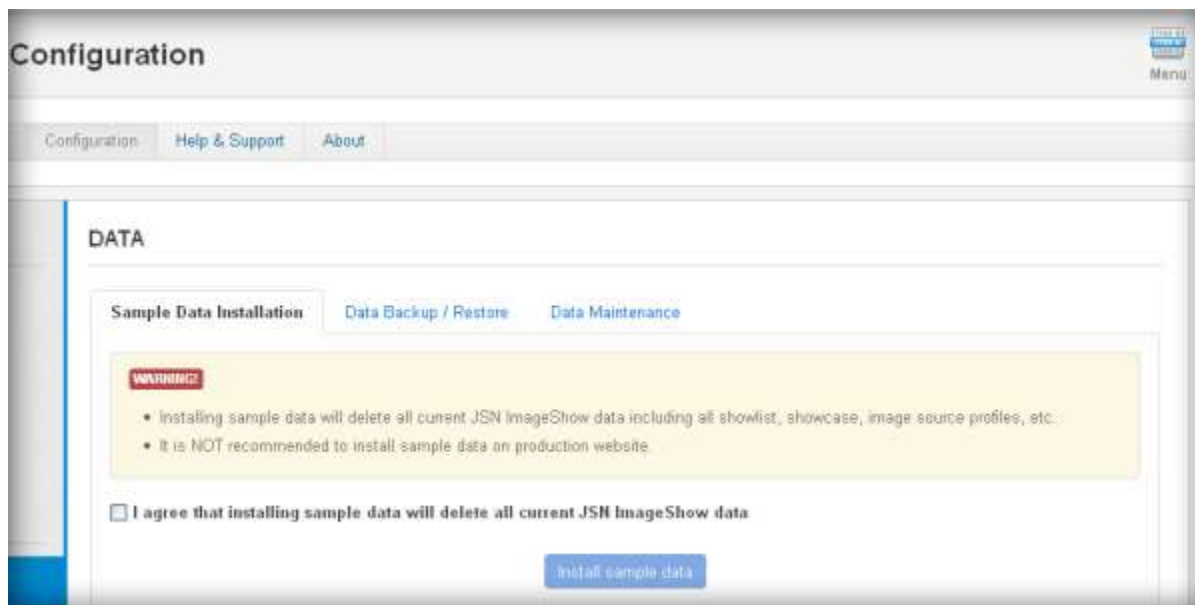

Add Access Control list

The new feature “Permission” is added to allow users to have more power in setting the permissions and images at back-end.

By selecting the permissions in “**Select New Setting**”, users have the relate value in “**Calculate Setting**”.

Data

Sample Data installation

In this section, you can manage data in your website.

Sample Data Installation

Sample data is the perfect choice for users who are new to JSN ImageShow. By installing sample data, you will have predefined showlist and showcase, so you can start using the product right away. Just by following simple on screen instructions to install sample data.

Get free ebook to learn how to build a Joomla website with easy steps - <http://ow.ly/fh6dL>

Data Backup / Restore

The screenshot shows the 'Configuration' window of the JSN ImageShow extension. At the top, there are tabs for 'Configuration', 'Help & Support', and 'About'. Below these, the 'DATA' section is active, containing three sub-tabs: 'Sample Data Installation', 'Data Backup / Restore', and 'Data Maintenance'. The 'Data Backup / Restore' sub-tab is selected. It is divided into two main sections: 'Data Backup' and 'Data Restore'. The 'Data Backup' section includes a 'Backup Filename' text input field, a checkbox for 'Attach timestamp to the filename', and 'Backup Options' with checkboxes for 'Backup showlists' and 'Backup showcases'. A blue 'Backup' button is located below these options. The 'Data Restore' section features a 'Backup File' text input field, a 'Browse...' button, and a blue 'Restore' button.

Backup/Restore function

Data backup / restore function was built to keep your data safe. This is especially useful, when you are migrating website or upgrading to the new version of Joomla!. Keep in mind that this backup / restore feature covers only JSN ImageShow data, not the entire website data.

Data backup

In this section, you can perform data backup operation.

- **Backup Options** - Defines what assets to backup: Showlists, Showcases or both.
- **Backup Filename** - Defines the name of the backup file. You can check the box “Attach timestamp to the file name” to create a file name with date inserted for easier management.

Data restore

In this section, you can perform data restoration operation.

- Click **Browse** button and select previously created backup file
- Click **Restore** to start restoration

All current showlists and showcases will be replaced with those imported from the backup file.

Data Maintenance

Data maintenance function

With JSN ImageShow, each image can be presented via 2 sizes: Big size and thumbnail size. Local Image Folder just provides big images. So that, JSN ImageShow brings you a mechanism to automatically generate thumbnail images from big images.

If there is any problem with thumbnail images from Local Image Folder, you should use this function to re-create all thumbnail images.

Image Sources

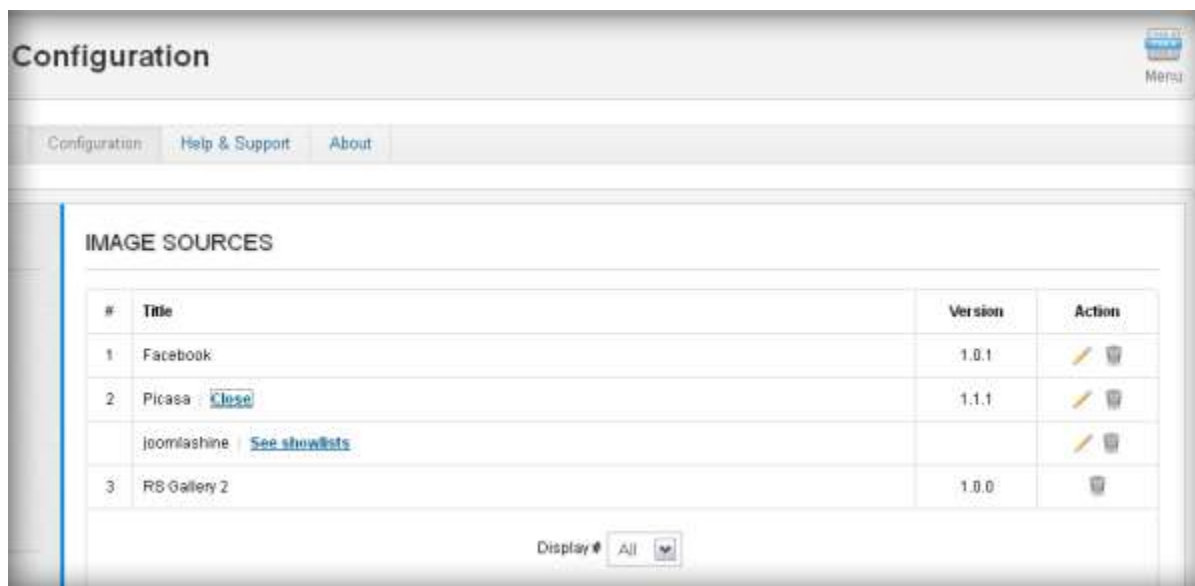

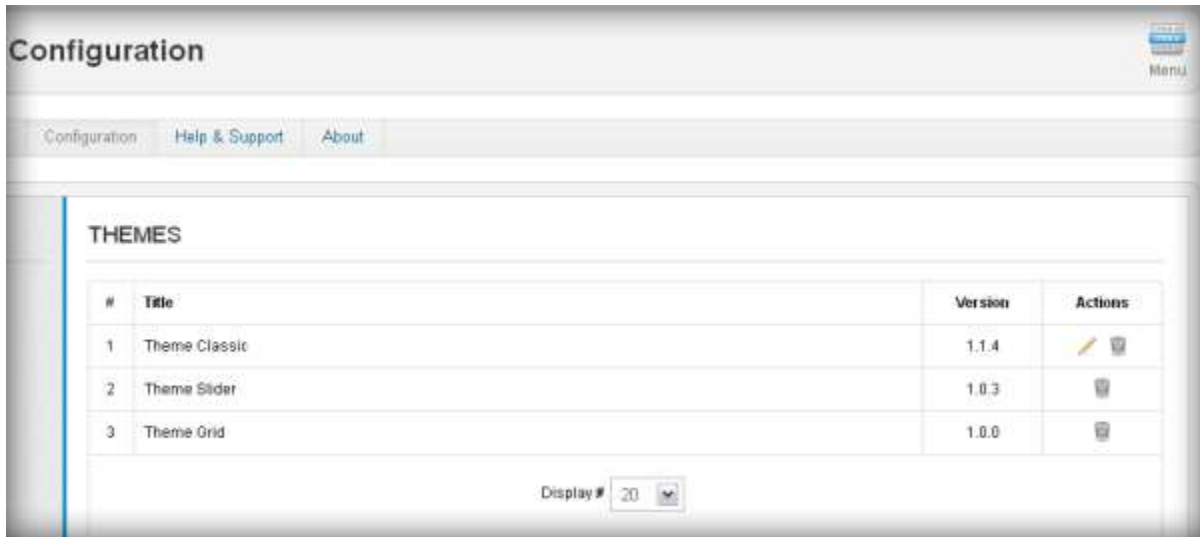

Image Source profiles management

In this section, you can manage all your image source profiles.

You can delete image sources installed. Besides, with external sources – Flickr and Picasa, you can see showlists you have created from them.

Themes

Themes management

In this section you can perform maintenance operations with themes. JSN ImageShow provides themes mechanism which allows you to present a gallery in multiple variations. You can select and configure theme on the showcase setting page.

[For newbies] Download free e-books to build Joomla! websites

2 Free E-books, written by JoomlaShine Team

Building a Joomla website is a challenge with a lot of Joomla! newbies. To help you do this task more easily and quickly, JoomlaShine team released 2 FREE e-books: **Joomla! 2.5 Made Easy** and **Joomla! 3.0 Made Easy**. You know, you get useful manuals whatever Joomla! version you use: Joomla! 2.5 or Joomla! 3.0, and in 3 languages: English, German or Danish. Both of them include 6 chapters as following:

- Get to know about Joomla! CMS
- Install Joomla! on local host
- Create content for your site
- Customize website appearance with a Joomla! template
- Arrange modules in positions
- Expand your website functionality with Joomla! extension

You can download them **free**.

Joomla! 2.5 Made Easy

Joomla! 3.0 Made Easy
